

## Post-Pandemic Recovery From What, For Whom, and How?

A virtual symposium, October 4, 2022

00:16:17.000 --> 00:16:22.000

Welcome to today's webinar post pandemic recovery from what?

00:16:22.000 --> 00:16:29.000

For whom and how Dr. Monica Shakespeare will now begin.

00:16:29.000 --> 00:16:38.000

Hello, everyone! i'm Monica with the Johns Hopkins Center for Health Security and Webinar, co-organizer, with my colleague, Dr.

00:16:38.000 --> 00:16:54.000

Sanjayan Arabi today, and thursday we're going to engage a broad community of practitioners in discussions about how to operate a holistic process of post pandemic recovery, and at the outset

00:16:54.000 --> 00:16:59.000

I would like to thank our funder the open Philanthropy Project for making today's event possible.

00:16:59.000 --> 00:17:05.000

Just a quick review of today's Agenda We have a wonderful opening keynoteer, Dr.

00:17:05.000 --> 00:17:21.000

Lawrence T. Brown, followed by that participants in Round Table Number One are from very diverse sectors, housing, education, community development, health care, public health and rural health, well prescribed practical remedies for the pandemics

00:17:21.000 --> 00:17:27.000

urgent and ongoing harms to critical community systems.

00:17:27.000 --> 00:17:35.000

After a break we will move to Round Table number 2, and thought leaders from spiritual trauma, Recovery and restorative justice.

00:17:35.000 --> 00:17:43.000

Traditions will identify forms of relief and care that, taken to scale, can alleviate the inner damages.

00:17:43.000 --> 00:17:50.000

People have suffered during the pandemic Let me just share a few housekeeping notes in the interest of time.

00:17:50.000 --> 00:18:01.000

We're going to introduce speakers by name title and organization, and refer you to the more detailed bio sketches of our esteemed speakers available with the online agenda.

00:18:01.000 --> 00:18:06.000

There'll be a link in the Chat and you can also use the that earlier Qr.

00:18:06.000 --> 00:18:12.000

Code. We encourage you the audience to submit questions via the queue in a box.

00:18:12.000 --> 00:18:17.000

Please note, however, that there are hundreds of you. Thank you for coming, and also very limited time.

00:18:17.000 --> 00:18:24.000

So please forgive us if we can't get to your question Occasionally we're going to post to the Chat.

00:18:24.000 --> 00:18:33.000

Some recovery, related resources that both Round Table participants and the planning committee have singled out as valuable for attendees.

00:18:33.000 --> 00:18:45.000

And please know that a recording of proceedings for today and Thursday will become available online, and we'll share that link in the chat with you later on.

00:18:45.000 --> 00:18:49.000

I did want to take a few minutes to set the context for the webinar.

00:18:49.000 --> 00:18:57.000

I mean, What? Why are we here? apart from the obvious I did want to share some background information.

00:18:57.000 --> 00:19:11.000

So for a number of years prior to the pandemic Sancho, and I observed that an epidemics, readiness, and response phases tended to capture the disproportionate notice of decision makers

00:19:11.000 --> 00:19:29.000

practitioners, news services, and planners, and as the tail end of an epidemic curve trails off, it seemed to us that people assume that the concerning public health event is over.

00:19:29.000 --> 00:19:37.000

But the lived experiences of major outbreaks of infectious disease indicate otherwise.

00:19:37.000 --> 00:19:46.000

So way before the lingering effects of long, Covid, surfaced we knew epidemic recovery can be long and complex.

00:19:46.000 --> 00:19:59.000

In In the case of Zika you saw that geeon bare syndrome can diminish household budgets, that pregnancy loss can prompt, complicated grieving, and the need for moral support and that

00:19:59.000 --> 00:20:07.000

congenital Zika syndrome can mean ongoing medical and social service needs for affected children.

00:20:07.000 --> 00:20:15.000

Again way before the protracted Kovat. 19 pandemic beleaguered our public health and health care work forces.

00:20:15.000 --> 00:20:23.000

We knew that restoring the health sector post epidemic is a major challenge due to its rapid.

00:20:23.000 --> 00:20:32.000

No zochomial transmission. for instance, Sars sick and healthcare workers disproportionately get prompted Ptsd.

00:20:32.000 --> 00:20:50.000

Through their severe emotional distress, and it contributed to employee burnout and low productivity. and before COVID-19 widened social, fracturing and disrupted economies, we knew that major outbreaks could have totalizing

00:20:50.000 --> 00:20:58.000

the effects for communities. So during the West African Ebola operate in 2014 to 2,016.

00:20:58.000 --> 00:21:15.000

Fear led to stigma and to lost faith and health services, and also communities had to reconfigure social roles due to lost parents, wage earners, teachers, and local leaders and people had to work very hard to restore the

00:21:15.000 --> 00:21:21.000

rhythm of activity for schools, public services, markets, agriculture, and the health sector.

00:21:21.000 --> 00:21:35.000

So these are just 3 cases. but I think we can look at them and know that rebounding post event requires a much longer and a much broader view of outbreak management.

00:21:35.000 --> 00:21:50.000

Then a crisis response mindset permits So as a result of these observations, just prior to the start of COVID-19 the pandemic in late 2019.

00:21:50.000 --> 00:21:58.000

It just so happened that Sanjana and a colleague, Elena Martin and I decided to study this apparent blind spot or recovery.

00:21:58.000 --> 00:22:09.000

So we spoke with scholars, practitioners, and policymakers, who were actually in outbreaks disaster, recovery, community resilience, and or public health, emergency management.

00:22:09.000 --> 00:22:15.000

And we ask them, Why is post pandemic recovery?

00:22:15.000 --> 00:22:21.000

Not yet seen as a problem in need of a solution, and they gave us 4 explanations.

00:22:21.000 --> 00:22:31.000

The fuller studies available in in the chat. But the first observation was that urgent life inland matters take precedence, and recovery, takes the back.

00:22:31.000 --> 00:22:39.000

Seat. A poor response produces impacts that are very visible, more sickness, more death, more disruption.

00:22:39.000 --> 00:22:47.000

And constantly enumerated cases and deaths help elevate the problem and evoke sympathy and empathy.

00:22:47.000 --> 00:22:59.000

Secondly, the prolonged recoveries of marginalized, underserved communities generates generate less social attention.

00:22:59.000 --> 00:23:10.000

So the people most heavily affected by epidemics, whose recovery is likely to be protracted, are those to whom society routinely turns a blind eye.

00:23:10.000 --> 00:23:17.000

The thirdly, they pointed out largely a medicalized process.

00:23:17.000 --> 00:23:22.000

Response is seen to rest on the shoulders of a skilled public health and health care workforce.

00:23:22.000 --> 00:23:31.000

But epidemic recovery, which can touch many different sectors and affect many different community systems.

00:23:31.000 --> 00:23:45.000

Doesn't have a comparable dedicated resource, and skilled workforce. and, lastly, they pointed out that the definition of an epidemic and it's aftermath is subject to contestation, so

00:23:45.000 --> 00:23:51.000

What constitutes recovery is a political question. one of them underscored.

00:23:51.000 --> 00:24:04.000

A government can claim. Recovery has occurred once. the immediate crisis resolves, and yet still not address dysfunctions, amplifying a pathogens effects for human well-being.

00:24:04.000 --> 00:24:13.000

I think they're observations on the cusp of the beginning of COVID-19 are very precious about the pandemic.

00:24:13.000 --> 00:24:19.000

We don't have clarity or ownership around the job of recovery.

00:24:19.000 --> 00:24:23.000

The debate continues, Is recovery about returning to the status quo?

00:24:23.000 --> 00:24:36.000

Or is, Michael Marmot says, building back fairer? and a large proportion of the country, understandably is already looking at the pandemic from the rearview mirror.

00:24:36.000 --> 00:24:48.000

Yet hundreds of people are dying daily, and community systems haven't regained full functionality. So that is some context.

00:24:48.000 --> 00:25:05.000

For why we have organized this workshop, this webinar, and the purpose of discussions today and Thursday is to rough out for local leaders some kind of blueprint that includes an overriding vision and a

00:25:05.000 --> 00:25:15.000

set of specific actions for implementing a comprehensive pandemic recovery in which some people have been hit harder than others.

00:25:15.000 --> 00:25:21.000

So I want to thank you for making time in your very busy schedules for this event.

00:25:21.000 --> 00:25:27.000

I'd like now to introduce our opening keynote Speaker Dr.

00:25:27.000 --> 00:25:37.000

Lawrence T. Brown, a research scientist in the News Center for Urban Health Equity at Morgan, State University, and author of The Black Butterfly.

00:25:37.000 --> 00:25:43.000

The harmful politics of race and space in America. over to you, Dr.

00:25:43.000 --> 00:25:54.000

Brown. Thank you, Monica, and I really appreciate the invitation to deliver this keynote this morning, for everyone who who is not on the east coast were, of course, for us.

00:25:54.000 --> 00:26:07.000

It's just reached noon, so I want to get started, and before I dive into what I want to say today, I wanted to acknowledge that this is a nation that is going through a tremendous amount of issues.

00:26:07.000 --> 00:26:22.000

Certainly we have you know we're here to talk about the pandemic, but we're hopefully we're also very much in giving our thoughts and prayers to our friends in Florida who've been hit by a devastating

00:26:22.000 --> 00:26:33.000

hurricane. also in South Carolina. there have been some loss of life there, and also this year we're thinking about people from Eastern Kentucky a lot of flooding that happened there.

00:26:33.000 --> 00:26:40.000

Jackson, Mississippi, also experiencing tremendous issues with the water infrastructure.

00:26:40.000 --> 00:26:44.000

And then, of course, you know the mass shootings that took place in Buffalo.

00:26:44.000 --> 00:26:52.000

And you, Baldi, so so many of our communities are dealing, not just with the pandemic, but in reality ascendemic.

00:26:52.000 --> 00:27:05.000

This sort of synergy of pandemics and epidemics that are all converging impacting many communities at once. And so how do we emerge from all of the issues that we are facing?

00:27:05.000 --> 00:27:22.000

I think that's the question I want to raise for us this morning, and with that I want to start with the theme, and the thought that I have for you today, and that is basically that democracy is the recovered democracy is the

00:27:22.000 --> 00:27:30.000

recovery. But before that I want to dive into some data here from the County Health rankings and Robe Maps program.

00:27:30.000 --> 00:27:35.000

We see counties among the least healthy from their 2,020 key findings.

00:27:35.000 --> 00:27:40.000

Report. And so you see these counties here that are in purple.

00:27:40.000 --> 00:27:47.000

Those are some of the counties that had the lowest ranking among the outcome measures that they used.

00:27:47.000 --> 00:27:50.000

And if we look at this map as well, we see life expectancy.

00:27:50.000 --> 00:27:56.000

Some of the same counties. actually appear to have more issues, as you might expect.

00:27:56.000 --> 00:28:05.000

Certainly, if they're least healthy then there's going to be also a lower life expectancy in many of those counties.

00:28:05.000 --> 00:28:20.000

When I looked at this map back in 2,020, I was able to identify a certain pattern on what it became clear to be was that you had where the blue circle is oval. These The white appellation counties that

00:28:20.000 --> 00:28:35.000

are experiencing many issues. Then there's the southern black belt counties in many of our Southern States. And then to the west, you see a lot of the darker counties are actually counties with native tribal lands

00:28:35.000 --> 00:28:46.000

And so these are some of the counties that are dealing with many issues, even more so than many of our other areas around the nation.

00:28:46.000 --> 00:28:57.000

And then here's the map of children in poverty among us counties, and in some ways I like to think that this map is about telling us the future of the country.

00:28:57.000 --> 00:29:11.000

These are the children. And so, if there are issues today in these counties, then these are the counties that we're going to see issues in going forward, and we see some of the same counties that are being highlighted counties with native

00:29:11.000 --> 00:29:17.000

tribal lands. The white appellation counties Black Belt Counties in the South and then us.

00:29:17.000 --> 00:29:22.000

But on this map you actually see the orange cluster at the bottom, the oval.

00:29:22.000 --> 00:29:31.000

There you see the appearance of us Mexico border counties that are where children are dealing with high levels of poverty.

00:29:31.000 --> 00:29:48.000

So these are sort of the 4 geographic clusters where we can understand something about who's hurting the most in this nation who was the most vulnerable when the pandemic hit our shores back in 2,020 now

00:29:48.000 --> 00:29:52.000

when the pandemic first hit. I want you to go back to 2,020.

00:29:52.000 --> 00:29:59.000

There was 3 waves really that sort of characterized the way that the pandemic emerged in the United States.

00:29:59.000 --> 00:30:07.000

There's that initial wave where we first sort of found out what was, you know people were being, you know, first infections we were hearing about in the United States.

00:30:07.000 --> 00:30:18.000

They were in Seattle they were in California then nursing homes and cruise ships were beginning to get hit really hard, and it was still not yet apparent.

00:30:18.000 --> 00:30:34.000

We didn't have a lot of data the testing wasn't as strong as it should have been, and so it wasn't until March, when it became very apparent that the pandemic was really in full force and that's when

00:30:34.000 --> 00:30:50.000

we saw large numbers in urban areas like New York, New Orleans, and so by the first third, or by the certainly by the middle of the month there was a shutdown across the nation to Try to contain the spray of the

00:30:50.000 --> 00:31:03.000

pandemic. and then by the summer, even by April and May, the virus really had spread to rural areas the tribal lands and in counties that are more rural in the deep.

00:31:03.000 --> 00:31:10.000

South. And so looking at the data just a couple of weeks after the shutdown really hit.

00:31:10.000 --> 00:31:17.000

And this data comes from the United States Covid Atlas, at the University of Chicago.

00:31:17.000 --> 00:31:25.000

It became clear to me that these cities that were popping up, that were showing up as concentrated areas where Kovat was really impacting.

00:31:25.000 --> 00:31:29.000

Those many of these cities had legacies of hyper segregation.

00:31:29.000 --> 00:31:43.000

So we're talking about Either they are accurately segregated hypersectiongregated cities like Detroit, Chicago, Boston, New York City, or they had a history of hyper segregation.

00:31:43.000 --> 00:31:46.000

Even if statistically, they were no longer hyper segregated.

00:31:46.000 --> 00:31:53.000

The history of that seemed to auger some sort of rationale behind the spread of this virus.

00:31:53.000 --> 00:31:58.000

So you had Atlanta, Washington, Dc. Nashville, Albany, Georgia.

00:31:58.000 --> 00:32:04.000

And so these were the. This was a pattern that was very clear to me.

00:32:04.000 --> 00:32:09.000

Early on that, as this virus made it, it was not just.

00:32:09.000 --> 00:32:13.000

It was concentrated in urban areas in particular and in hyper.

00:32:13.000 --> 00:32:24.000

Segregated cities at that. So all of these cities here, as you see, either they're currently hyper segregated, or they were once hyper segregated.

00:32:24.000 --> 00:32:28.000

Now, what is it? How do we sort of understand hyper segregation?

00:32:28.000 --> 00:32:38.000

You may be asking that. So that was a measure of by 2 social scientists, sociologists, Nancy Denton and Douglas Massey.

00:32:38.000 --> 00:32:51.000

They co-wrote a book back in the ninetys called American Apartheid, And so they used these 5 different measures to understand racial segregation in urban metropolitan areas.

00:32:51.000 --> 00:32:56.000

And you can see those measures on the right side of the screen.

00:32:56.000 --> 00:33:00.000

An evenness, isolation, clustering concentration and system.

00:33:00.000 --> 00:33:15.000

And so they all range between 0 and 100, and if the city was over 60 to on just one of those managers, then that city was considered to have a low level of segregation.

00:33:15.000 --> 00:33:20.000

If they were overseas steel. On 2 of those measures they were considered to be moderately segregated.

00:33:20.000 --> 00:33:35.000

If they were over 60. On 3 of those measures they were considered highly segregated, and then, if they were over 60 on 4 or 5 of those measures, they were considered Hyper segregated, cities, and so interestingly I thought

00:33:35.000 --> 00:33:47.000

these are 5 different measures. So I made the analogy of a hurricane category, one through 5. And so the cities on the right side of my screen, I'm. going to go back to that slide in a moment the cities

00:33:47.000 --> 00:33:51.000

on the right side of that screen. These are cities that are over 60.

00:33:51.000 --> 00:33:56.000

On each of those 5 measures, so that I call them category.

00:33:56.000 --> 00:34:07.000

5 hyper segregated cities, and That's What We're, seeing right here those 8 cities Baltimore, Birmingham, Chicago, Cleveland, Detroit, Flint, Milwaukee, St.

00:34:07.000 --> 00:34:18.000

Louis. So these 8 cities are classified as being over 60 in all 5 measures, and just like a hurricane.

00:34:18.000 --> 00:34:26.000

These are cities that have the most damage when it comes, are most damaged, due to racial segregation.

00:34:26.000 --> 00:34:33.000

Now, what does that really lead to, especially when it relates to the pandemic?

00:34:33.000 --> 00:34:38.000

Well, we saw spatial inequity in covid testing rates and testing sites.

00:34:38.000 --> 00:34:50.000

So these 3 studies that you can see on your screen. This research has already been done to really reveal that cities that had that were highly segregated hyper segregated.

00:34:50.000 --> 00:35:00.000

They were found to have more despairity when it comes to testing rates for the Latino population in Chicago and New York.

00:35:00.000 --> 00:35:10.000

But then also there was also disparity. in testing Sites and that's in cities like Chicago, New York, Philadelphia, Los Angeles, Houston.

00:35:10.000 --> 00:35:29.000

These cities were found, many of them to have disparities, and, for instance, cities that were wealthier neighborhoods in these cities that were wealthier, they often had more testing science, wealthier and wider communities often had more testing sites and then more Latino

00:35:29.000 --> 00:35:33.000

more African-americans in a community they often had less testing sites.

00:35:33.000 --> 00:35:46.000

Now, of course, if you're going to track a pandemic you're going to track a virus the thing you're going to need in your community is robust testing and the people that needed the most did not have it in

00:35:46.000 --> 00:35:51.000

their community at the same level as wealthier and wider communities in our country.

00:35:51.000 --> 00:35:54.000

In these urban hyper segregated areas.

00:35:54.000 --> 00:35:58.000

And so the that's the damage of racial segregation.

00:35:58.000 --> 00:36:13.000

That's the damage of hyper segregation is that it results in the hyper deprivation of resources in Latino and black communities, and then it results in the hyper allocation of resources extra resources.

00:36:13.000 --> 00:36:18.000

Extra benefits, extra access for wealthier and wider neighborhoods.

00:36:18.000 --> 00:36:26.000

And so that's the harm of racial segregation, and we saw that play out the early phases of the pandemic.

00:36:26.000 --> 00:36:40.000

And then, like I said by April by May, as we see from this data from April, the 20 fourth, 2,020, many of our native American tribal lands were being hit very hard when it came to code and so this is

00:36:40.000 --> 00:36:47.000

data that We're, seeing here Mckinley, County, New Mexico, Novel County, Arizona, Apache County, Arizona.

00:36:47.000 --> 00:37:02.000

These counties were also being slammed by the virus, and that was also very much apparent, as though counties and those folks struggled with the initial impact of the virus.

00:37:02.000 --> 00:37:16.000

But then, like, I said, is spread to rural counties and So it's just this is sort of a demographic map of the country, and we can see here in the last row. that rural counties have the least amount of people 46

00:37:16.000 --> 00:37:28.000

1 million, but they constitute the most counties in the country and So that's that dark blue that you see so rural America doesn't have as many people as urban areas.

00:37:28.000 --> 00:37:41.000

But they're more spread out. They constitute a larger area in a larger number of counties across the nation going back to Monica's point at the top.

00:37:41.000 --> 00:37:48.000

You know, you see here that before the pandemic we know that there were issues.

00:37:48.000 --> 00:37:59.000

And so in rural areas we see here, as you see in the green circle, the yellow circle and the blue circle which represents in rural communities rural communities had less access.

00:37:59.000 --> 00:38:05.000

When it came to physicians or primary care, physicians and dentist.

00:38:05.000 --> 00:38:12.000

So much less access to medical and health professionals in rural counties.

00:38:12.000 --> 00:38:16.000

And then also we look at preventable hospitals days.

00:38:16.000 --> 00:38:28.000

We saw that even before the pandemic again, rural areas, folks living in rural areas had much higher rates of preventable hospitals, phase.

00:38:28.000 --> 00:38:34.000

And so rural areas are also facing these tremendous challenges.

00:38:34.000 --> 00:38:37.000

And so we want to make sure that we understand that.

00:38:37.000 --> 00:38:50.000

And similarly we see on this slide where there's adult obesity, rural counties in the country facing a higher level, nearly 32% of obesity compared to it's just under 26% for

00:38:50.000 --> 00:38:54.000

urban areas, so that's more of a challenge in rural areas.

00:38:54.000 --> 00:38:58.000

And then there's more unemployment more children living in poverty.

00:38:58.000 --> 00:39:04.000

These are issues that are being faced in rural counties and rural areas across the nation.

00:39:04.000 --> 00:39:11.000

Now, especially what what is also damaging is the lack are the challenges in the public health departments.

00:39:11.000 --> 00:39:25.000

So if you're going to have an epidemic you're gonna have a virus that's coming to the county in a rural area, they're facing more challenges in terms of their ability to respond to those to the

00:39:25.000 --> 00:39:38.000

emerging health issue. you can see on the right side. These are the things that public health departments do. they monitor the health? they evaluate folks who are maybe dealing with issues, health issues.

00:39:38.000 --> 00:39:42.000

They provide link to care. they enforce laws, they develop policies.

00:39:42.000 --> 00:39:48.000

But rural health departments often have fewer staff, as you see.

00:39:48.000 --> 00:39:52.000

In Point number 2. they lack specially staff with the exceptional nursing.

00:39:52.000 --> 00:40:02.000

So, for instance, the they are many of them, don't have epidemiologists who are trained professionals in terms of tracking where the virus is going, and if your Health Department doesn't have an

00:40:02.000 --> 00:40:07.000

epidemiologist that places that county at a severe disadvantage.

00:40:07.000 --> 00:40:15.000

These rural counties often rely on partnerships, but are limited in the number and types of local organizations.

00:40:15.000 --> 00:40:20.000

Just by the scale economies of skill, and then also, many of them are underfunded.

00:40:20.000 --> 00:40:26.000

And so they have limited access to technology. and I have to come off of the share screens.

00:40:26.000 --> 00:40:33.000

Just so I can make a point and say all of public health is underfunded in America.

00:40:33.000 --> 00:40:44.000

And that's another thing that really stey me and damage and hurt our ability to respond to the virus that hit our shores.

00:40:44.000 --> 00:40:55.000

We had health departments that in many ways, even if they went full force with Covid, the ball was dropped in other areas because they had to pull people from chronic disease.

00:40:55.000 --> 00:41:07.000

They had to pull people from infectious disease and so What we saw is that even though there is a full force effort to deal with Covid, you know, of course, when the shutdown first occurred, you know people put off elected

00:41:07.000 --> 00:41:14.000

surgeries, people, weren't getting tested for other diseases stis, the sexually transmitted infections.

00:41:14.000 --> 00:41:28.000

We started going up and we're dealing with that crisis now, so we often in our nation, and i'm speaking to my public health, or excuse me, our good my Government the folks right now, especially if you're in office this is

00:41:28.000 --> 00:41:42.000

for you. We don't think about what public health does until there's a crisis. it's hard to really understand and especially if your data person metrics you like metrics and outcomes.

00:41:42.000 --> 00:41:48.000

The best way to measure public health is what doesn't happen I mean that's the best measure she says.

00:41:48.000 --> 00:41:53.000

Did we prevent a rise and infections? Did we prevent, You know more?

00:41:53.000 --> 00:42:01.000

Hiv. did we prevent, you know, lead poisoning so It's hard to measure and really appreciate.

00:42:01.000 --> 00:42:10.000

Sometimes the value of public health, when the best measures of understanding public health is when something does not occur.

00:42:10.000 --> 00:42:19.000

Of course everybody understands when there's an issue when the epidemic takes place when the pandemic takes place.

00:42:19.000 --> 00:42:24.000

Then we all love a sudden understand why public health is so important.

00:42:24.000 --> 00:42:37.000

But unfortunately, by the time the pandemic comes if you haven't fully resources. if you haven't fully equipped your public health agency, if you have a major folks or training that you've hired folks that you've given

00:42:37.000 --> 00:42:45.000

them the tools they need they're not going to be equipped They're not going to be ready to deal with these monumental challenges.

00:42:45.000 --> 00:42:49.000

So public health overall is deeply underfunded.

00:42:49.000 --> 00:43:07.000

But rural counties that face that challenge even more. And so one way that we should really understand this is the way that many hospitals are closing in rural areas, and we see, since 2,005 to the left of this

00:43:07.000 --> 00:43:14.000

graphic produced by the chef center in Unc Chapel Hill.

00:43:14.000 --> 00:43:24.000

Over the past 15 years or so, the hospital closures have increased. So we're seeing more and more hospitals that are being closed.

00:43:24.000 --> 00:43:30.000

And then, if you look at the charter on the right, there was a decrease in 2,021, only 2 hospitals closed.

00:43:30.000 --> 00:43:41.000

But, as you might imagine, if you're following policy those recovery funds probably helped a lot of hospitals keep their doors open.

00:43:41.000 --> 00:43:53.000

But as that money up, we are likely to see more hospitals close going forward into the future, so that's the concern that we really have to look out for.

00:43:53.000 --> 00:43:56.000

Now again, what is it that hospitals do? We know?

00:43:56.000 --> 00:44:01.000

They provide services. We know that you know handled emergencies, with emergency rooms.

00:44:01.000 --> 00:44:07.000

And so when a hospital closes you know and you're in a rural area, where are you gonna go?

00:44:07.000 --> 00:44:14.000

You know. How far do you have to travel now to receive services to receive care that you need.

00:44:14.000 --> 00:44:31.000

And so this becomes a very critical issue when you're talking about something like the covid 19 pandemic, and indeed a host and variety of other issues even quote unquote regular issues like a heart attack you know that's an emergency

00:44:31.000 --> 00:44:39.000

you need immediate, urgent care, but with these hospitals closing folks in rural counties often don't have care. now.

00:44:39.000 --> 00:44:57.000

This is something that we really have to look at, in particular, in states that did not approve the Medicare extension or approve Medicaid, not Medicare, Medicaid during the Obama Administration.

00:44:57.000 --> 00:45:09.000

They were trying to expand medicaid. some States declined medicaid expansion, and those are the States that are seeing in witnessing more of these hospital closures.

00:45:09.000 --> 00:45:21.000

And so there's the policy element coming into play and here's a map of closures since 2,005 that we can see all across the nation.

00:45:21.000 --> 00:45:32.000

These kids are being truly impacted particularly when it's a closure, a permanent closure, and there's no conversion or a reopening like in my home county.

00:45:32.000 --> 00:45:36.000

The hospital closed my home county's crittton county Arkansas.

00:45:36.000 --> 00:45:50.000

It closed for 3 years. We didn't have a hospital and then it We had a new one come in and opened up, so we were very fortunate that our hospital, even though we lost it A few years later we were able to get

00:45:50.000 --> 00:46:06.000

another hospital in our county in arkansas so it's. very apparent that biology viruses attack social vulnerability under, you know, viruses they don't have know a mind of their own.

00:46:06.000 --> 00:46:14.000

They're not thinking you know organisms but they're just you know they're trying to find a host and they're trying to you know.

00:46:14.000 --> 00:46:28.000

Reproduce and affect, so that that virus can keep going, and unfortunately, is a truism that societies where there's deep inequality nations where there's social vulnerability that's what the virus

00:46:28.000 --> 00:46:39.000

is going to find this way to those communities. and it's going to start spreading and percolating the most in the areas where there's vulnerability.

00:46:39.000 --> 00:46:50.000

So I think we really have to understand this notion if we're going to recover. if we're going to be ready for the next pandemic then we have to understand.

00:46:50.000 --> 00:47:04.000

Where are we dealing with vulnerability in our nation and That's especially in the we're dealing with the people in places that have been red line subprime marginalized and demonized?

00:47:04.000 --> 00:47:13.000

These are the areas where we're seeing tremendous vulnerability in the nation, and these are the areas that are going to need.

00:47:13.000 --> 00:47:18.000

Now I want to get to the solution because I know That's what many of you are here for.

00:47:18.000 --> 00:47:23.000

How are we going to get out of the missed that we are in?

00:47:23.000 --> 00:47:28.000

And again i'm talking about not just even the covid pandemic.

00:47:28.000 --> 00:47:41.000

But i'm talking about the larger way in which the country is facing so many issues, we're talking about the hurricanes that I've mentioned earlier the infrastructure in Jackson Mississippi talking about

00:47:41.000 --> 00:47:52.000

infrastructure to go back to the Flint Water crisis in Flint Michigan folks, and we had an issue here in Baltimore, where in West Baltimore, E. Coli.

00:47:52.000 --> 00:48:07.000

Was found in some of the water, and folks there have been had to have it boil their water some days, receive bottle water, so infrastructure and segregated hyper segregated cities that have large black populations

00:48:07.000 --> 00:48:15.000

infrastructure that we're seeing is a critical issue we know that issues we saw in Kentucky the Eastern Kentucky.

00:48:15.000 --> 00:48:24.000

The flooding earlier this year, climate change producing these stronger storms, increase rainfall stronger hurricanes.

00:48:24.000 --> 00:48:30.000

So this is something that we know is going to keep happening unless we change the way we operate.

00:48:30.000 --> 00:48:46.000

Not only as a society, but as a global community. So what are we going to do to emerge from the syndic that we're facing it, which is spearheaded by the pandemic characterized by the covid

00:48:46.000 --> 00:48:52.000

19 bars. How are we going to deal with that i'm suggesting that democracy is the root democracy?

00:48:52.000 --> 00:48:58.000

Is the way we emerge from the pandemic is the way that we recover.

00:48:58.000 --> 00:49:03.000

But what kind of democracy is the question? What kind of democracy?

00:49:03.000 --> 00:49:18.000

And I submit to you that we have a democracy certain certainly, but it's imperil in America right now, and we know that if we go to the pledge of allegiance, we live in a republic and the republic that is characterized

00:49:18.000 --> 00:49:22.000

by a representative democracy. we elect folks who there represents.

00:49:22.000 --> 00:49:25.000

They go to Congress. You know that we serve on this at the State level.

00:49:25.000 --> 00:49:31.000

They're serving the State House State delegates Assembly, whatever you call it, in your state.

00:49:31.000 --> 00:49:40.000

So we have a representative democracy in America, and this democracy that is teetering on the edge.

00:49:40.000 --> 00:49:44.000

And I suggest that this representative democracy is all right.

00:49:44.000 --> 00:49:59.000

But we need to go further. We need to strengthen our democracy, and I want to point you to what what I consider who are considered to be the greatest social scientist of all time, and that is Dr. W. E. B.

00:49:59.000 --> 00:50:11.000

Du Bois, he wrote black reconstruction in America back in 1,935, and he talks about abolition democracy here on page 83 I'm.

00:50:11.000 --> 00:50:27.000

Going to read a portion of this, where he says: As the abolition democracy gained in prestige and power, they appeared as prophets, and led by statesmen, they began to guide the nation out of the morass into

00:50:27.000 --> 00:50:44.000

which it had fallen. They and their black friends there he's referring to white abolitionists and black abolitionists in the North. The new freedmen, the formerly enslaved people, black folks in the South became gradually

00:50:44.000 --> 00:50:56.000

the leaders of a reconstruction of democracy in the upper States while marching millions, saying the noblest war song of the ages. and that was the crisis of the time.

00:50:56.000 --> 00:51:03.000

The Civil War to the tune of John brown's body mine eyes have seen the glory of the coming of the Lord.

00:51:03.000 --> 00:51:07.000

He is trampling out the bench where the grapes of wrath are stored.

00:51:07.000 --> 00:51:12.000

He hath loosed the faithful lightning of his terrible slip sword.

00:51:12.000 --> 00:51:18.000

His truth is marching on, and so I just wanted to read their last part because I got excited.

00:51:18.000 --> 00:51:37.000

But this notion right here that you, weak, that, and had fallen into a morass, that we were syncing down, and we were in a heap of trouble that we needed to have that this nation needed to have a reconstruction of

00:51:37.000 --> 00:51:45.000

democracy and abolition democracy. One that said something is not right with our society.

00:51:45.000 --> 00:51:53.000

And if we're going to emerge from this crisis, if we're going to recover from this crisis, and this is back after the Civil War.

00:51:53.000 --> 00:52:06.000

If we're going to recover we're going to have to reconstruct democracy, there has to be reconstruction, because communities have been harmed, communities have been damaged, and I submit that we need the same kind

00:52:06.000 --> 00:52:25.000

of thinking today that we're dealing with this deeply devastating pandemic and the pandemics that I've mentioned earlier crises and infrastructure crises of climate change crises of communities that are being impacted

00:52:25.000 --> 00:52:30.000

by mass shootings, and then the everyday, devastating gun violence.

00:52:30.000 --> 00:52:44.000

In so many countries, so many counties and cities across the nation that if we're going to make it out of this, we're gonna have to find a way to address the obstacles and barriers that communities are experiencing I know this is what

00:52:44.000 --> 00:53:00.000

you're going to talk about in the upcoming panels, and the upcoming discussions as a part of this great convening that's being held today, and on Thursday and so I want to leave you with a few thoughts

00:53:00.000 --> 00:53:07.000

around. what abolition democracy can look like it would until so.

00:53:07.000 --> 00:53:22.000

Here. I want to start with the notion that the abolition democracy means that when you listen to people from all backgrounds, cultures, perspectives, and communities, you know, democracy means listening.

00:53:22.000 --> 00:53:31.000

That you have to have ways and forums and gatherings like bees and others where you're able to listen it.

00:53:31.000 --> 00:53:37.000

Sometimes the folks with the degrees like me, I got 3 flow degrees.

00:53:37.000 --> 00:53:44.000

We need to be listening. We need to be the ones listening and let folks in communities.

00:53:44.000 --> 00:53:59.000

The talking. So if you're the gut in Government sometimes you need to sit down, and I look I go to I've gone to several city council meetings here and back home in Arkansas, and the

testimony period the

00:53:59.000 --> 00:54:07.000

citizens of 2 min. You get 2 min to talk now. I know you don't want to be there all night, but sometimes 2 min is not enough.

00:54:07.000 --> 00:54:15.000

I think sometimes we want to have people give people a quick time to talk, and then we want to move on.

00:54:15.000 --> 00:54:18.000

Sometimes it takes we need to i'm not saying you need to let folks talk forever.

00:54:18.000 --> 00:54:25.000

But i'm just saying we need to have something where we are really listening to people, and that's just listening.

00:54:25.000 --> 00:54:32.000

But having conversation, so that you can really understand what are the issues? how is it that we're going to rebuild this nation going forward?

00:54:32.000 --> 00:54:39.000

We don't have both with degrees folks who are running governments We don't have our answers.

00:54:39.000 --> 00:54:44.000

We don't have all answers the only way We're going to rebuild this country is that we listen.

00:54:44.000 --> 00:54:51.000

We sit down we listen to folks from a variety of areas because we have what are called blind spots.

00:54:51.000 --> 00:54:55.000

We don't see, maybe because of our position of privilege and status.

00:54:55.000 --> 00:55:12.000

We don't see what folks are going through so the only way we're going to understand and be able to help develop a comprehensive approach is if we listen, Take a back seat sometimes and let communities speak and let folks articulate what it

00:55:12.000 --> 00:55:22.000

is that They're going through the next thing is we need to provide restorative resources to those 4 geographic clusters that I mentioned earlier.

00:55:22.000 --> 00:55:32.000

We had to help the least of these, and also provide those resources to red line neighborhoods and hypersegregated metropolitan areas.

00:55:32.000 --> 00:55:36.000

So you know the areas that I talked about earlier the counties with tribal lands. The Us.

00:55:36.000 --> 00:55:41.000

Makes the cold border counties. why Appalachian communities, Southern black built communities.

00:55:41.000 --> 00:55:46.000

And I have to mention, of course, these communities don't just have they're not all white or all black.

00:55:46.000 --> 00:56:03.000

They're there. Other people there, too, but this is how I think we can sort of generally think about which populations may be more dominant, or maybe more concentrated in those communities, even though they certainly have other people living in them and

00:56:03.000 --> 00:56:08.000

Then, thirdly, we need to remove the roadblocks to democratic participation.

00:56:08.000 --> 00:56:12.000

That's pretty much what I said earlier so i'm gonna move on to the last one.

00:56:12.000 --> 00:56:19.000

We, which is strengthened public health before the next disaster.

00:56:19.000 --> 00:56:23.000

Our pandemic strikes because y'all another one that's coming.

00:56:23.000 --> 00:56:28.000

It's going to be something some virus some something is going to be coming.

00:56:28.000 --> 00:56:35.000

Climate change. it's happening so we got stuff that we know the future is perilous.

00:56:35.000 --> 00:56:43.000

We know we live in a highly global society. Everybody is not really thinking about the impacts of what we're doing to our climate.

00:56:43.000 --> 00:56:51.000

We got wildfires out in the West water issues out in the West as well within Tata, and talked about the West without their issues out there as well.

00:56:51.000 --> 00:56:59.000

So what we're gonna have to do in this nation to recover truly is reconstruct democracy.

00:56:59.000 --> 00:57:04.000

And I think that is the way forward for us in the United States.

00:57:04.000 --> 00:57:25.000

Thank you. Thank you so much, Lawrence. Oftentimes we hear the words immunity and economy, as it relates to pandemic recovery and the introduction of democracy. and that is our endeavor and

00:57:25.000 --> 00:57:30.000

enterprise, I think, is a way to really open up this discussion, and very, very ways.

00:57:30.000 --> 00:57:38.000

So thank you very much for spending time with us today and setting the bar for for this discussion.

00:57:38.000 --> 00:57:49.000

I want to now welcome the participants for Round Table number one, and I would also like to introduce our moderator.

00:57:49.000 --> 00:57:57.000

Dr. Jennifer Horny Who's Professor of Epidemiology at the College of Health Sciences, with the University of Delaware.

00:57:57.000 --> 00:58:05.000

She's also on the core faculty of disaster research center over to you, Jen.

00:58:05.000 --> 00:58:14.000

Thank you all. Hopefully, Everyone can hear me, and somebody give me a thumbs up working. Thank you.

00:58:14.000 --> 00:58:19.000

Working in a shared space out here on a Pacific time.

00:58:19.000 --> 00:58:25.000

And so happy to be part of this really important

00:58:25.000 --> 00:58:34.000

And thoughtful discussion about what happens next i'm feeling constantly that we're falling into that trap that disaster.

00:58:34.000 --> 00:58:41.000

Scholars have told us about for years, which is that we just want to go back to the way that it was. so.

00:58:41.000 --> 00:58:45.000

We have a an incredible panel today. We We are missing Dr.

00:58:45.000 --> 00:58:49.000

Cassandra Davis, she's not able to be with us today.

00:58:49.000 --> 00:58:59.000

But we are going to hear from representatives from a lot of really important sectors representing the vital conditions and social determinants.

00:58:59.000 --> 00:59:17.000

And thinking about not only the urgency that we have with recovery, but the kinds of enduring harms that we're going to need to continue to address with that I will kick it off with our

00:59:17.000 --> 00:59:37.000

first prompting question to the panelists, and think about that more immediate harms of the pandemic, not only to public health, but to public health systems and other social infrastructure systems that we need during recovery more than

00:59:37.000 --> 00:59:54.000

ever So if i'll go first to to John if you could perhaps speak a bit about the harms to your sector in in terms of both the urgent or acute and short term, and then what you see more in the

00:59:54.000 --> 01:00:04.000

long term, and and also thinking about the kinds of solutions that leaders might be needing to look for. and we'll just go around and hear from from everyone on that.

01:00:04.000 --> 01:00:11.000

Thank you. thank you, jennifer i'm a housing advocate.

01:00:11.000 --> 01:00:22.000

I am a Texas perspective. I work statewide in the state. so I'm gonna talk a little bit about what we've seen in housing and been securely housing for the poor which is what I concentrate on as

01:00:22.000 --> 01:00:28.000

the co-director of Texas housing a nonprofit organization that has offices around the State.

01:00:28.000 --> 01:00:37.000

So the quote first question I was asked to address is how to measure If we've reached recovery and there's there.

01:00:37.000 --> 01:00:47.000

There was a long standing and affordable housing crisis, but for for the poor, before the pandemic and the pandemic broad millions of households to the edge of homelessness.

01:00:47.000 --> 01:00:59.000

So if by recovery we mean return to the pre-pandemic housing crisis, then recovery will be when rent to income ratios and affordable supply, return to pre-pandemic levels.

01:00:59.000 --> 01:01:11.000

But this understates the long-term economic harm suffered by people who face eviction and the emotional and mental health costs of households who are on the brink of homelessness.

01:01:11.000 --> 01:01:20.000

The pandemic showed us just how precarious housing is for the poor, or reminded us in non pandemic times.

01:01:20.000 --> 01:01:36.000

We needed to build a better economic cushion in low income housing markets, or we're going to chronically be repeating these hugely expensive, poorly administered and poorly targeted housing interventions as the next

01:01:36.000 --> 01:01:40.000

pandemic, and the next natural disaster roll out.

01:01:40.000 --> 01:01:45.000

So the second question has to do with what are the lingering arms, and how are we going to address them?

01:01:45.000 --> 01:01:50.000

Related to a affordable housing. I have 8 points here i'm going to try to get through.

01:01:50.000 --> 01:02:07.000

I've got 5 min. The The Federal and local eviction moratoria were important in preventing massive housing loss, and surprisingly both political parties used eviction moratorium to varying extense successfully many States and cities

01:02:07.000 --> 01:02:20.000

took action independent of those Federal efforts. Also eviction moratorium, are, were vital and are a vital proven tool that prevented much greater housing catastrophe.

01:02:20.000 --> 01:02:25.000

Number 2, given the effectiveness of the preemption of evictions.

01:02:25.000 --> 01:02:36.000

By these. By these declarations we need to be concerned about the future impact of the Supreme Court ruling that limits federally imposed eviction.

01:02:36.000 --> 01:02:49.000

Moratorium which is put in place at the end of the the biden administration's auditorium efforts the court's ruling will cripple our country's ability to effectively respond to future

01:02:49.000 --> 01:02:58.000

calamities. This is very serious stuff. We need to shore up legislation that makes clear the authority of chief executives at all levels of government.

01:02:58.000 --> 01:03:15.000

To exercise this emergency power. Number 3. We quickly built a generally workable national network for distributing emergency rental assistance that did great service in keeping people housed.

01:03:15.000 --> 01:03:25.000

However, geographic gaps occurred, as some jurisdictions did pretty good, and others failed or refused to administer emergency.

01:03:25.000 --> 01:03:42.000

Rent, assistance, local staff capacity, and experience by local cities and states seem to be determinative of the success levels along with attitudes toward racial tolerance and acceptance and racial discrimination.

01:03:42.000 --> 01:03:47.000

We believe that the emergency rental assistance is more effectively and more fairly administered.

01:03:47.000 --> 01:03:53.000

Therefore, as a Federal program, although many local cities and States did a great job.

01:03:53.000 --> 01:04:09.000

But a lot of people got left out for the reasons I just named Number 4, having demonstrated that the effectiveness of emergency red assistance and creating a distribution network in most places that kept poor families housed we

01:04:09.000 --> 01:04:20.000

shouldn't let emergency red assistants die. but we should instead institutionalize and fund an ongoing national rent assistance.

01:04:20.000 --> 01:04:35.000

Network their traditional strategy that we employ in the housing world where we focus on housing production can't be the sole approach for affordable housing. As many more people lose their homes through eviction on the back end that get new housing

01:04:35.000 --> 01:04:45.000

on the front end of the production. General block grants and this is the other thing we've observed that I think is important from public policy standpoint.

01:04:45.000 --> 01:04:51.000

General block grants like Arpa funds, they went to states and cities for pandemic release.

01:04:51.000 --> 01:05:03.000

Relief too often got hijacked and didn't end up being used for pandemic relief, and certainly didn't benefit out salts facing the housing crisis in my State our legislature set aside 2 billion

01:05:03.000 --> 01:05:11.000

dollars of Arpa funds in the bank, hoping to change the rules so that they can use it for tax relief.

01:05:11.000 --> 01:05:16.000

Dedicated funds like era are necessary if we're going to respond to pandemics number 5.

01:05:16.000 --> 01:05:31.000

Lots of people lost housing, both through self-eviction and judicial action and the right to council, which is in place in very few locales, can reduce or delay evictions by maybe around 20%.

01:05:31.000 --> 01:05:44.000

That's important eviction. Court watchers which we did a lot of during the eviction noted that the poor administration of justice on the part of many judges in lower courts was really problematic, and we need better oversight

01:05:44.000 --> 01:05:55.000

and training of judges and better presentadal law reforms to ensure that, the further lower these unjust evictions.

01:05:55.000 --> 01:06:01.000

Number 6. eviction record tracking and blacklisting of tenants who were evicted.

01:06:01.000 --> 01:06:08.000

Keep those tenants from being able to access housing in the future, and can play tenants for decades.

01:06:08.000 --> 01:06:23.000

These services need Federal and State guidelines like those that regulate credit reporting services, and most States don't add that number 7 media attention on the judicial evictions during the pandemic has improved the

01:06:23.000 --> 01:06:38.000

awareness of the way that our landlord tenant laws and eviction procedures unfairly favored landlords over tenants, and to address this States and cities need to better balance eviction and land more tenant laws and then

01:06:38.000 --> 01:06:54.000

finally Number 8. The shortage of affordable rental housing for the poor got massively worse, as the pandemic began to obey and to address this, we have to have better income targeted housing production at the poor and this

01:06:54.000 --> 01:07:05.000

is not when I want to emphasize this as many in the media are claiming these days simply a shortage of supply caused by housing development regulations.

01:07:05.000 --> 01:07:20.000

That's part of the problem. But public funding is not effectively targeted and subsidizing housing for the poorest people, and that is, producing the crisis in affordable housing, which is largely at the bottom that's

01:07:20.000 --> 01:07:25.000

what i've got as a general overview of those first questions, Jennifer, i'll get back to you.

01:07:25.000 --> 01:07:32.000

Thank you so much. And so I wanna although this was not the plan, because we had a someone who was asked.

01:07:32.000 --> 01:07:39.000

But I want to move sort of from that. I think micro housing to a lot larger community development perspective.

01:07:39.000 --> 01:07:46.000

So donna do you have a chance to address these first 2 questions.

01:07:46.000 --> 01:07:50.000

So. thank you so much, and it's a pleasure to be here this afternoon.

01:07:50.000 --> 01:07:54.000

I was so intrigued by Dr. brown's opening remarks I'm.

01:07:54.000 --> 01:08:03.000

Calling in from the Treasury Department this morning, where we are having a form related to Friedman Right.

01:08:03.000 --> 01:08:07.000

Friedman's bank was an institution perform shortly after the Civil War.

01:08:07.000 --> 01:08:14.000

That was focused primarily on inside, formerly enslaved.

01:08:14.000 --> 01:08:26.000

The bank unfortunately met I a a too early demise based on some very from being a portion.

01:08:26.000 --> 01:08:32.000

When I hear Dr. Brown talking about this need to really look at.

01:08:32.000 --> 01:08:36.000

How do we have this democracy? How do we keep that going?

01:08:36.000 --> 01:08:43.000

How do we build that up i'm reminded of just how much additional So I'm.

01:08:43.000 --> 01:08:51.000

President and Cdfi I'm. sorry President you know of a community development. financial. I'm.

01:08:51.000 --> 01:09:06.000

Struck like off the ground comments about making sure that We're, listening to various people from all back backgrounds because Appalachian community capital that I run it covers the entire State of West Virginia and then portions

01:09:06.000 --> 01:09:10.000

of 12 other States, with the bottom portion of what literally we follow.

01:09:10.000 --> 01:09:18.000

The spine of the Appalachian mountains all the way down to the top portion of the We are a small business lender.

01:09:18.000 --> 01:09:35.000

We are a community development window, which means that we along with the other 2 5 across the country, a single mission that is to serve on this market, and we know that, regardless of what pressure we're serving in this case, business, we also have

01:09:35.000 --> 01:09:42.000

Cdfi that are involved in housing communities, facility, and other sectors.

01:09:42.000 --> 01:09:52.000

We know that, for community supplies you can't sector all of those sectors with us.

01:09:52.000 --> 01:10:09.000

Is one that we have a particular because of the region that we're working in Appalachia is 420 counties that are designing part of Appalachia.

01:10:09.000 --> 01:10:20.000

Dr. Brown is correct in that predominantly white region, as it relates to the population. but it's also has 20% of its population that I of color.

01:10:20.000 --> 01:10:24.000

So we understand that diversity is everywhere throughout this nation.

01:10:24.000 --> 01:10:37.000

And clearly as we looked at the pen impact of the pandemic, we saw that in this region. Oh, that population continue!

01:10:37.000 --> 01:10:44.000

By the pandemic. Pretty movie enough the Appalachian region.

01:10:44.000 --> 01:10:50.000

4 years leading up to we're still recovering from the great recession of 2,007.

01:10:50.000 --> 01:11:07.000

To. So that's good 2,009 recession yeah. the region that much more to recover for a lot of reasons mostly due to on investment.

01:11:07.000 --> 01:11:24.000

But we were seeing some small household income, 2,011 and 2,01520, with 80. Yeah.

01:11:24.000 --> 01:11:33.000

The less accounting throughout the region. it the overall pop poverty in Appalachia,

01:11:33.000 --> 01:11:44.000

Which is 1413,015 and 2,020.

01:11:44.000 --> 01:11:49.000

We certainly did that. There were, you know, a lot of Jane for a number of.

01:11:49.000 --> 01:11:59.000

But there were also things that show that there was some remaining vulnerabilities that were exacerbated by cultural economic impact of Covid 19.

01:11:59.000 --> 01:12:12.000

So, though regional poverty late have declined overall right to stay the same or increased, and in 5 Appalachian talent, any app apple license population twins older than the nation as a whole with individual

01:12:12.000 --> 01:12:17.000

agents.

01:12:17.000 --> 01:12:35.000

Appleton accounting additionally, the 5 and over, with a disability with more than 3 for households or children under the age of is higher than the national rate.

01:12:35.000 --> 01:12:41.000

So clearly we are seeing the when they made impact related to health in this region.

01:12:41.000 --> 01:12:51.000

Not only again in both communities and population, but but also even more so in population.

01:12:51.000 --> 01:13:08.000

I'll call it. And so one of the things that I think, yeah, mindful of of working in conjunction with health, related organizations to identify and address some of the major priorities that are happening in this community so

01:13:08.000 --> 01:13:15.000

priorities have to come from the community. It requires a building of capacity of the Cdfi.

01:13:15.000 --> 01:13:24.000

It requires collaboration. The public and private sectors work help structure to identify.

01:13:24.000 --> 01:13:35.000

And I think we need to look not just the boot causes. it's awesome time to actually not only just food and security, environmental and .

01:13:35.000 --> 01:13:40.000

But also financial institute, and i'll talk a little bit more about that.

01:13:40.000 --> 01:13:49.000

I don't being the co-founder and board chair of a 6 7 member organization.

01:13:49.000 --> 01:14:00.000

Call. Yeah, we have been American aligned A. Pdf: I think you we, too, are very much focused on some of the health issues that we are seeing in those communities.

01:14:00.000 --> 01:14:07.000

Some of those might be still small, my minority and majority community, but others Pdf files that are blackware also.

01:14:07.000 --> 01:14:19.000

Supporting majority black wid majority minor people the color in in the a lot to talk about.

01:14:19.000 --> 01:14:26.000

I'll stop here because I know we've got a number of panelists as well, who have amount of information.

01:14:26.000 --> 01:14:31.000

Yeah, Well, thank you, General: Thank you. And I. I think that it is natural that we move on on.

01:14:31.000 --> 01:14:44.000

That idea of root causes and thinking about the partnership development and collaboration that's necessary to address these kinds of complex health issues.

01:14:44.000 --> 01:14:53.000

So we'll turn it over to our next panelists to address some of those issues.

01:14:53.000 --> 01:14:57.000

Anora. sorry. thank you sorry I wasn't sure if we were going in the order.

01:14:57.000 --> 01:15:03.000

Well, good morning, everyone, and thank you, John Hawkins, and the Center for real security for the invitation to join him.

01:15:03.000 --> 01:15:07.000

So inspired already by the a few speakers before me.

01:15:07.000 --> 01:15:17.000

So I want to reflect a little bit Dr. Brown thank you so much for your tremendous remarks this morning, and i'm actually gonna deviate a little bit from my pre-written remarks because i'd like to respond

01:15:17.000 --> 01:15:29.000

to a couple of themes that I think are paramount, not just in terms of the collaborative partnerships. But I do want to reflect a little bit on the impacts to health care, and some of the things that I think

01:15:29.000 --> 01:15:42.000

shape what we can do in terms of the healthcare partnerships, but also, I think, urgent issues that we need to address in order to think about the continuity and access to health care for everyone within our healthcare system So First.

01:15:42.000 --> 01:15:51.000

and foremost it I would be remiss if I didn't acknowledge the tremendous harm that's been done in terms of the healthcare workforce.

01:15:51.000 --> 01:16:02.000

And it really is just like public health and so many other sectors and industries, something that we really have to, I think, put urgent focus on both in terms of investment in solutions.

01:16:02.000 --> 01:16:08.000

But really taking a wholeistic approach and realize thinking about the health care workforce across the whole continuum.

01:16:08.000 --> 01:16:24.000

And I think i'm not sure if we get fully appreciate the interdependencies across the continuum of health care and the need to really drive towards holistic solutions that are going to address the immediate crisis in the psychological

01:16:24.000 --> 01:16:37.000

well-being of so many of our healthcare providers to address the traumatic injury that I think, in the moral distress that many of across our health care community, regardless of what sector they're from our

01:16:37.000 --> 01:16:53.000

experiencing right now to recognize the the rise, continued rise and violence against both public health and our health care workforce as a crisis that needs continuous and vocal kind of outcry and community solutions to try to mitigate

01:16:53.000 --> 01:16:59.000

but also just the the access around the the pipeline within our workforce.

01:16:59.000 --> 01:17:10.000

And I think about the context of our workforce availability also in terms of the impact that that is having near term and kind of in the context of the question about recovery.

01:17:10.000 --> 01:17:21.000

We are a long way from, I think, being able to replenish the healthcare workforce that we are going to need in order to address the access issues.

01:17:21.000 --> 01:17:27.000

And the ongoing public health and healthcare impacts that we have in our communities.

01:17:27.000 --> 01:17:37.000

So for the sake of time this morning, I when I think about the healthcare workforce, I actually there's been some very good thinking, and i'm not affiliated in this case with the national Academy of medicine.

01:17:37.000 --> 01:17:46.000

But very recently a good report that I would refer folks to in terms of the national plan that they just recently released.

01:17:46.000 --> 01:17:54.000

For healthcare workforce well-being, and you know they've outlined a nice set of points that I would have made.

01:17:54.000 --> 01:18:02.000

Otherwise, but I would encourage folks to reflect on some of their recommendations, as I think, a good guide in terms of the local experience.

01:18:02.000 --> 01:18:14.000

We have in seeing what the impacts are. to health care providers. I think there's a really strong set of recommendations that I would encourage folks to look at.

01:18:14.000 --> 01:18:19.000

I want to think about the impacts to health care workforce in the context of access.

01:18:19.000 --> 01:18:34.000

And Dr. Brown made some extraordinary connections in terms of the impacts to the rural communities and the the downstream effect of impacts on rural hospitals and rural health care providers on amplifying various levels of

01:18:34.000 --> 01:18:36.000

inequities, and I will underscore that.

01:18:36.000 --> 01:18:46.000

That is a critical gap, and we need to be looking at every aspect of our healthcare system from the perspective of what policies do we need to put in place?

01:18:46.000 --> 01:18:58.000

What solutions can we garner that increase access to care both in our rural, but also sustained care in our urban areas where there's a lot of interdependency for our rural partners, we've seen a

01:18:58.000 --> 01:19:03.000

number of solutions come out in terms of surge management come forth.

01:19:03.000 --> 01:19:13.000

So level loading strategies, moving patients from rural areas to urban areas to get access to tertiary care.

01:19:13.000 --> 01:19:23.000

But we also continue to see limitations in being able to really optimize those solutions that help enhance access Because we have limited numbers of providers.

01:19:23.000 --> 01:19:31.000

We have limited numbers of space and we have policies that sometimes don't actually streamline that kind of surge planning.

01:19:31.000 --> 01:19:35.000

And so, as we think about, where do we need to go from here?

01:19:35.000 --> 01:19:50.000

Both in the short term, looking forward towards the winter, which I fear is gonna bring forth another surge for us, and also the longer term, How do we look across the continuum of care at our policies, and really think are all of these policies

01:19:50.000 --> 01:20:03.000

working together, actually going to improve access to care. So How do we look at the long-term care, environment and think about whether it's at the Cms level, Or, you know, Medicaid, reimbursement levels that are decided at

01:20:03.000 --> 01:20:11.000

state levels or various regulatory environments. How do we really ask the question of, Are these policies going to improve access across the continuum?

01:20:11.000 --> 01:20:25.000

Are we going to? Can we enact policies that help streamline getting patients into long-term care which will improve the conditions within hospitals which remain very overcapacity for a wide variety?

01:20:25.000 --> 01:20:33.000

Of reasons, and we have so many impacts in getting patients out of hospitals and into appropriate settings, both in the rural and urban environments.

01:20:33.000 --> 01:20:50.000

We need to continue to look at policies that support good financial health and well-being for

our health care providers, but also again really making sure that we're looking across the continuum with our cms policies with our in-state regulatory policies and our reimbursement

01:20:50.000 --> 01:21:03.000

models to make sure we are putting in place policies that are going to streamline the discharge of patients from hospitals into appropriate levels of care that are going to keep patients near our top when possible, and so to do

01:21:03.000 --> 01:21:12.000

that we need to look at policies that actually support the reimbursement and equitable payment to hospitals.

01:21:12.000 --> 01:21:23.000

When patients need to move from rural to urban or tertiary care providers, and then getting those patients back, we need to record that we have reimbursement challenges for ems when they need to transport those

01:21:23.000 --> 01:21:30.000

patients between rural and urban and back so there's a number of different policies that we can look at, and improvement.

01:21:30.000 --> 01:21:42.000

I think that we need to address now in order to think about how we continue to deliver care in the most equitable, equitable way, but ensuring access in as many forums as possible.

01:21:42.000 --> 01:21:57.000

And lastly, I the question of community coalitions of public and private partnerships, healthcare coalitions like my own, that work across the continuum of care and with public health, and with private sector partners I think

01:21:57.000 --> 01:22:00.000

really are the crux of a lot of solutions.

01:22:00.000 --> 01:22:16.000

And so, not only do we need to build upon these partnerships and and create an infrastructure that really supports the engagement across the continuum of care, and with a wide variety of community in public public health and other

01:22:16.000 --> 01:22:30.000

public sector partners. We need both at the Federal level and also from private foundations and other community levels, the kind of advocacy for collective impact models that support preparedness and response and recovery work.

01:22:30.000 --> 01:22:40.000

We need to have investment and policy environments that really support the promotion of these kinds of public private partnerships and the kinds of solutions that we can generate.

01:22:40.000 --> 01:22:46.000

And I think we need to collectively see those as a part of the next step of preparedness is really about the building.

01:22:46.000 --> 01:22:57.000

More duplic, reducing the duplication of effort, streamlining our efforts, and building more partnerships that are really meant to work across the whole community and bring together the best practices and resources of public and private

01:22:57.000 --> 01:23:01.000

partners, and i'll pause there i'm really looking forward to the conversation.

01:23:01.000 --> 01:23:07.000

Thank you. Thank you so much. And I think that this you know.

01:23:07.000 --> 01:23:13.000

Actually, I guess all of us are working at so many intersections of all of these systems. But Dr.

01:23:13.000 --> 01:23:24.000

Matthews is going to speak next, and I think that communications and technology are 2 of your areas of expertise which kept coming to mind over the last speaker.

01:23:24.000 --> 01:23:30.000

So. thank you, we'll look forward to what you have to say here, thanks, Jennifer.

01:23:30.000 --> 01:23:36.000

Hi everyone, i'm Sarah and thanks for having me you know as a applied epidemiologist and governmental public health.

01:23:36.000 --> 01:23:46.000

My team, and I would always say there's Nothing like an outbreak to get your blood flowing, and certainly the covid 19 pandemic is a doozy of an outbreak.

01:23:46.000 --> 01:23:53.000

As we all know, the pandemic exposed all of our cracks, our vulnerabilities, and our incompetence.

01:23:53.000 --> 01:24:00.000

Structurally, no longer hidden was our societal lack of help, literacy, and our significant health inequities.

01:24:00.000 --> 01:24:14.000

Typically in the public health sector issues we've discussed free pandemic were brought to the forefront, such as or antiquated computer systems are lack of capacity in terms of workforce are disagreeable methods for

01:24:14.000 --> 01:24:20.000

recruitment and retention, and our inadequacy on our own focus on our own mental health.

01:24:20.000 --> 01:24:32.000

As an optimist, I say our covid 19 response and recovery gives us a chance to do it right, because we've all felt the effects of it in sufficient public health system.

01:24:32.000 --> 01:24:39.000

Public health is community health, community health involves all aspects, including those sectors.

01:24:39.000 --> 01:24:51.000

My round team colleague, brown table colleagues are speaking about today, and within the next few days. so short term and long-term terms include a cute chronic and mental health conditions.

01:24:51.000 --> 01:24:56.000

And we put our nation at risk we're becoming sicker so what do we do?

01:24:56.000 --> 01:25:13.000

I would like to invite everyone on this call to think systems approach and begin to integrate a help in all things I'd like to recommend a three-tiered approach that is, individual organizational and systems. level.

01:25:13.000 --> 01:25:20.000

The first. here is an in bad individuals we have some responsibility to become more help.

01:25:20.000 --> 01:25:32.000

Literate to prepare ourselves. Our communities are families to the best of our abilities, to know when to ask for help, and to participate in community.

01:25:32.000 --> 01:25:47.000

This can look like taking a Post Aid class volunteering at a food bank, participating in one of the numerous outreach events that your local public health department puts on including your community health assessment and community health

01:25:47.000 --> 01:25:54.000

improvement plans your chaws and your chips in power to build resilience.

01:25:54.000 --> 01:25:59.000

Our greatest tool and public health is our communication to educate.

01:25:59.000 --> 01:26:12.000

We collect and disseminate data to drive decisions we implement in for interface, to empower individuals to better health, and we help build a community or place unit communities in charge.

01:26:12.000 --> 01:26:22.000

You from the organizational level. We have to build a better public health system that's able to respond to the needs of the community with the power to communicate.

01:26:22.000 --> 01:26:38.000

This includes their pay schedules faster recruitment processes, a better career ladder screen and a change in mindset that we don't continually ask our workforce to do more with less it's also an operational

01:26:38.000 --> 01:26:45.000

process that I recommend to all sectors as we begin to integrate this help in all approach.

01:26:45.000 --> 01:26:58.000

In other words, Bill. Finally, since level, this is where our policy lawmakers and advocates have the biggest influence as structural barriers are identified.

01:26:58.000 --> 01:27:03.000

It. Book moves us to change, to ensure. our communities are not subjected to needless suffering.

01:27:03.000 --> 01:27:10.000

What are they? Nonbiased data shows that a brown or black community is disproportionately affected.

01:27:10.000 --> 01:27:18.000

Name it, and do something about it. don't just give the statistic, and leave communities to spend for themselves.

01:27:18.000 --> 01:27:25.000

When we see that our rural community is not getting appropriate funding, or they're being left out simply because they're small change.

01:27:25.000 --> 01:27:35.000

It help improve equitable funding algorithms, and personally invite and engage relationships with rural communities.

01:27:35.000 --> 01:27:42.000

In other words, collaborate local leaders can start to facilitate proper revenues to emergency response.

01:27:42.000 --> 01:27:57.000

They first ensuring their own help. Literacy, by knowing their community from a public health perspective, inclusive of the political and social determinants of health, develop a vocabulary that is inclusive and scientifically accurate

01:27:57.000 --> 01:28:15.000

practice 2 way and risk communication. that's by person to help build the 4 and 12 local leaders can support community partnerships and collaborations ensure recipients of funding

are taking a community centered approach with an

01:28:15.000 --> 01:28:21.000

evaluation arm, go to the people instead of always asking them to come to you.

01:28:21.000 --> 01:28:39.000

The people who most need your advocacy are too busy trying to live, support policies that ensure building a resilient community, including flexible work, schedules, volunteerism as well as access to home surfaces, Finally, invite

01:28:39.000 --> 01:28:48.000

public health to your table as a consistent contributor to your efforts, because, no matter what topic we choose, there's always impossible.

01:28:48.000 --> 01:29:07.000

Thank you. Thanks, Dr. Matthews. I think 1 one element that has been consistent across all the speakers, and that we have in this field often felt that there was sort of a unique resilience that rural communities have so when I

01:29:07.000 --> 01:29:18.000

hear now, specifically from an expert working in the rural setting I'm: thinking about how those kind of community systems might be unique.

01:29:18.000 --> 01:29:34.000

Thank you. I am Gayla Willen, and I am the CEO of a small critical access hospital in a rural county, and the Panhandle of Texas, and I really appreciate all the comments that everyone has offered about

01:29:34.000 --> 01:29:41.000

rural health care. Part of the challenges that we have are common with every healthcare system, with every hospital out there.

01:29:41.000 --> 01:29:53.000

But there are some that are unique to us. and Mr. Brown talked about staffing and some other people who talked about the workforce, and that is the thing that is a particular challenge for us.

01:29:53.000 --> 01:30:03.000

Our county has a population of less than 10,000, so as we look for those people who have special training nurses, positions, lab and radiology.

01:30:03.000 --> 01:30:19.000

Technologist, You know we don't have a large resource pool of people as they do in the urban areas, and we share the same potential employee pool with our neighboring counties who also have limited people So recruiting for

01:30:19.000 --> 01:30:35.000

us is a challenge. Every community needs in order to survive this schools, their churches and their hospitals, and the 2 things that hospitals need to survive our funding and staffing.

01:30:35.000 --> 01:30:41.000

So when the we work really hard to get our staff when the pandemic came along.

01:30:41.000 --> 01:30:45.000

Obviously the whole healthcare system is overwhelmed.

01:30:45.000 --> 01:30:54.000

Our hospital became. we don't have a icu normally when people need a higher level of care, we transfer them out to an urban area urban hospital.

01:30:54.000 --> 01:31:11.000

But there were no bits, so we became and I see you hospital, and we were taking care of our neighbors and our best friend's grandmother and our kids teachers and and people that we knew we want our nursing home as

01:31:11.000 --> 01:31:19.000

Mr. Brown mentioned it really tickets toll on the residents for a nursing home, and our staff

01:31:19.000 --> 01:31:31.000

As some of them became ill and had to be out you know There's long hours that you work there's the stress just of not knowing what this virus was, and this is a healthcare system. We were trying to figure it out and

01:31:31.000 --> 01:31:33.000

learn. You know. What is this virus, and how do we treat it?

01:31:33.000 --> 01:31:36.000

And how do we slow it down, and how do we stop it?

01:31:36.000 --> 01:31:42.000

And the the rules were kind of changing every day.

01:31:42.000 --> 01:31:50.000

It was very stressful, to say least i'm on the staff and so we were working short.

01:31:50.000 --> 01:31:54.000

Sometimes we try to get extra help in. people are working over time.

01:31:54.000 --> 01:32:00.000

The stress was just kind of beyond beyond bear tolerance.

01:32:00.000 --> 01:32:06.000

It sometimes. Then we had some agencies that would come along and say, Hey, we can help you, staff

01:32:06.000 --> 01:32:12.000

And then they would recruit our step out from under us pay them triple what we could pay them.

01:32:12.000 --> 01:32:14.000

And then. Now we've got another hole in in order to get more stab, you know.

01:32:14.000 --> 01:32:20.000

Do we pay this triple salary to this nursing agency, so that we're not short stacked.

01:32:20.000 --> 01:32:29.000

But then, that's demoralizing too our staff who stayed and become like, you know they were loyal to us because they, you know they like to have that kind of money as well.

01:32:29.000 --> 01:32:31.000

So. so it was kind of a cycle of you know.

01:32:31.000 --> 01:32:38.000

What do you do? we? We just want to survive and want to to do the right thing for our patient, so we want to do the right thing for our staff.

01:32:38.000 --> 01:32:45.000

The consequence of that was that many people in health care not just role, But many people in healthcare said, I don't want to do this anymore.

01:32:45.000 --> 01:32:51.000

And and so we have seen people leave health care as a career.

01:32:51.000 --> 01:32:55.000

Physicians, nurses, technicians I mean it's all across the board.

01:32:55.000 --> 01:32:59.000

Even people in Billing, you know. if another pandemic comes.

01:32:59.000 --> 01:33:02.000

I don't know that I want to live through that I'm not sure.

01:33:02.000 --> 01:33:04.000

I wanted to work through this one, but but here we are.

01:33:04.000 --> 01:33:10.000

So this urgent short term is is also a long term thing for us.

01:33:10.000 --> 01:33:22.000

It's already difficult to recruit people to the rural areas, because you know, we don't have the amenities that the urban areas have we don't have theaters you know big huge parks

01:33:22.000 --> 01:33:26.000

and we don't have you know a walmart and and Cbs.

01:33:26.000 --> 01:33:35.000

On every corner, and we don't have 24 7 things that are open, so that you all these activities and so that younger generation is really looking for that kind of excitement, and that's sort of not a lot.

01:33:35.000 --> 01:33:43.000

And we don't have that in general so this just compounded the fact that it's it's hard to get staff.

01:33:43.000 --> 01:33:48.000

So the question becomes, How do we convince people to come back into health care?

01:33:48.000 --> 01:33:55.000

Really good, strong clinicians. how do we convince them that it's okay to come back to healthcare.

01:33:55.000 --> 01:34:01.000

And the next part of that is, how do we convince people who are looking for a career to consider healthcare? You know how.

01:34:01.000 --> 01:34:07.000

How do we say, you know that pandemic is a one-time thing that won't happen again?

01:34:07.000 --> 01:34:11.000

Well, we don't know that how do we make healthcare attract again.

01:34:11.000 --> 01:34:25.000

So that's one thing that that really is a challenge for us the other thing is as the pandemic hit us in and grew and became more and more serious. Urgent part of our job at the hospital is to educate

01:34:25.000 --> 01:34:29.000

people and to tell them what is this what's going on how do we help you stay?

01:34:29.000 --> 01:34:37.000

Well, how do we treat you? If you do become ill and we're relying upon Cdc.

01:34:37.000 --> 01:34:41.000

And some other organizations to help us with that information.

01:34:41.000 --> 01:34:49.000

Is this one along? Our Our community was very confused because we were telling them one thing.

01:34:49.000 --> 01:34:54.000

The media took off the news every time you use to Had kind of a different story.

01:34:54.000 --> 01:34:59.000

No, don't do that Treat might get this treatment be sure and ask your doctor about this.

01:34:59.000 --> 01:35:04.000

Not do that. And then, of course, the Internet, which we all know is quite reliable.

01:35:04.000 --> 01:35:09.000

Everybody had a a Youtube. video and said no i'm The expert.

01:35:09.000 --> 01:35:14.000

Listen to me. we said we're mask wash your hands.

01:35:14.000 --> 01:35:18.000

This will help, and in many cases it did. but in other cases it did not.

01:35:18.000 --> 01:35:24.000

And some people just come to the virus, and and it was quite tragic for many, many people.

01:35:24.000 --> 01:35:38.000

So. our community, I think, lost confidence Not only in the healthcare system, but in our local hospitals and our local providers in our local clinics, because, you know, we're the ones that they look to and in this

01:35:38.000 --> 01:35:46.000

virus just took a life of its own and in them losing their confidence in us.

01:35:46.000 --> 01:35:53.000

They also, I think, began to not trust healthcare as a whole.

01:35:53.000 --> 01:35:58.000

You know who are these people and they're supposed to be the experts, and they have degrees, and and they're these.

01:35:58.000 --> 01:36:04.000

But they're telling us all these different things and we're hearing all these different things, and we don't know who to listen to.

01:36:04.000 --> 01:36:21.000

So I think long term one of the very large and and what difficult challenges that we're gonna have is regaining that confidence from our community and rebuilding that trust, so that they know that we they can count on

01:36:21.000 --> 01:36:26.000

us and and how do we do that and I think it's What other people have spoken to?

01:36:26.000 --> 01:36:36.000

We we partner with people We try to, you know. filter out the nonsense, and you know, kind of stand as a team.

01:36:36.000 --> 01:36:45.000

To give good information to them to be there when they need us. and to try to be as consistent as we can.

01:36:45.000 --> 01:36:51.000

And then in rule again, because we have small volumes, and you know he wants to move to rural community.

01:36:51.000 --> 01:36:54.000

But you want to come there if they have healthcare.

01:36:54.000 --> 01:37:04.000

But you need to trust that healthcare, so that I think that is gonna be a huge challenge for us as we go forward.

01:37:04.000 --> 01:37:18.000

Thank you so much I don't know if if Janet remembers she was one of the very first people that I met when I moved to Delaware, and I think that she works in a county that's been characterized as one of

01:37:18.000 --> 01:37:31.000

the most resilient in the country. So, looking forward to hearing your perspective from that that sort of community, health and social services wrap up.

01:37:31.000 --> 01:37:39.000

And then we have a second question that will let the panelists briefly respond to after we hear from Janet.

01:37:39.000 --> 01:37:45.000

So, thank you. thank you of course, of course, I Remember i'm actually a bit of an accidental tourist on your public health journey.

01:37:45.000 --> 01:37:49.000

And it's really funny that i'm now working for a hospital.

01:37:49.000 --> 01:37:57.000

So for the past decade I actually was spent my time primarily in emergency management. and, in fact, that's where I was when the pandemic started.

01:37:57.000 --> 01:38:01.000

I actually felt like I could do a lot more community good by moving over to the nonprofit

sector.

01:38:01.000 --> 01:38:08.000

So I work for our county wide food bank and Now i'm here, sitting across the street from a community hospital, and it's interesting.

01:38:08.000 --> 01:38:11.000

You're talking about the loss of rural hospitals unfortunately, in the county.

01:38:11.000 --> 01:38:23.000

I come from. We have shuttered. 2 hospitals within the past year. out of out of our hospital system. There's an adjoining county, also literally on the outskirts of Philadelphia is preparing to close 2

01:38:23.000 --> 01:38:29.000

more so in some cases they're being converted in some cases they're being there are question marks about what their future even is so.

01:38:29.000 --> 01:38:38.000

It's not just some of rural environment it's pervasive everywhere, and we are definitely considered about that health care loss.

01:38:38.000 --> 01:38:45.000

So, but that the original question is, Yeah, I think this conversation is absolutely imperative.

01:38:45.000 --> 01:38:52.000

Why? that? Because decisions are being made right now to ensure that the dollars and the best practices reach every community.

01:38:52.000 --> 01:38:57.000

And what I have seen time over time, and this really resonates with the keynote speaker.

01:38:57.000 --> 01:39:05.000

You know he was talking about those most at risk they're obvious I've been concerned about those for most at risk who are hidden. Why?

01:39:05.000 --> 01:39:13.000

Because these counties that I work in both currently and previously like to tap themselves as the healthiest as the wealthiest.

01:39:13.000 --> 01:39:23.000

That's great, if you're part of that subgroup, if you're not, it actually creates given a larger disconnect, because people are very quick to other things.

01:39:23.000 --> 01:39:32.000

So where a lot of these problems existed prep pandemic I think they're for a glimmer in time it really showed a light on them, and i'll take you through a few different examples of that.

01:39:32.000 --> 01:39:39.000

But I think now what we need to realize is we need to have a true understanding Of what did these communities look like in 2,019?

01:39:39.000 --> 01:39:45.000

What were the strategies, what were the successes? What can we build on out of what happened next?

01:39:45.000 --> 01:39:53.000

And how do we move forward collectively, But what we can't do? is simply have the expectation of we can take what was good in 2,019.

01:39:53.000 --> 01:40:03.000

Add what worked well through the pandemic use, less staff, fewer resources, and expect to do it all, because, as somebody alluded to, you could do more with more.

01:40:03.000 --> 01:40:06.000

You can do less with less where you can burn your staff out trying.

01:40:06.000 --> 01:40:10.000

And then really, what? what have you accomplished so I think that's really important.

01:40:10.000 --> 01:40:16.000

Actually come out of an education background. They had something called understanding by design and modeling their thoughts.

01:40:16.000 --> 01:40:25.000

Just a little bit for me is what recovery looks like it's Identify your desired results determine what your acceptable evidence is going to be.

01:40:25.000 --> 01:40:31.000

But now it comes to the point where you need to work with the community, not only to design it and implement it, but figure out ways.

01:40:31.000 --> 01:40:36.000

You can maintain it moving forward because it's great to come up with these great ideas.

01:40:36.000 --> 01:40:42.000

It's great to pilot them but if you don't leave the community with something that's sustainable and maintainable.

01:40:42.000 --> 01:40:44.000

You're simply going to be starting over the next time and at that point.

01:40:44.000 --> 01:40:50.000

There may be no resources, so I think that's I think that's important.

01:40:50.000 --> 01:40:56.000

Looking at it from through the food security lens this insecurity it's not necessarily lack of food.

01:40:56.000 --> 01:41:04.000

They're not the same things, although this for many people when they couldn't get their favorite foods with the grocery stores were shut down when there were supply chain issues.

01:41:04.000 --> 01:41:09.000

A wake up call that is not always the issue. things like.

01:41:09.000 --> 01:41:14.000

Why would people need prepared meals Well, people might need prepared meals?

01:41:14.000 --> 01:41:16.000

Because they don't have the dexterity to do it themselves.

01:41:16.000 --> 01:41:22.000

They don't have the cognitive ability to do that they may simply not have the desire or the time.

01:41:22.000 --> 01:41:35.000

Maybe they don't have electricity maybe you know giving somebody fresh produce is fantastic. but if they have no way to store it or prepare it, what have you actually accomplished? so I think it's really from a systems perspective, it's understanding

01:41:35.000 --> 01:41:43.000

that healthy eating is critical, but from an actual day to day implementation, what is it gonna take in order to do that?

01:41:43.000 --> 01:41:47.000

Is it access? And what does that mean? Is that access to the boot itself?

01:41:47.000 --> 01:41:51.000

Or is that access to human service programs within those human service programs?

01:41:51.000 --> 01:42:04.000

Again. You know how accessible are they really so i'm sitting here on the convergence of freedom counties, which means we have 3 different social networks that we're trying to work through.

01:42:04.000 --> 01:42:08.000

And then the services are found by county so we can't help them.

01:42:08.000 --> 01:42:22.000

So, whereas for some folks we're working within our 10 mile radius can get to the county

assistance office by walking and or by local transportation in the bus system, someone who lives next door is so either going to have to

01:42:22.000 --> 01:42:28.000

travel 18 miles in one direction or 22 miles in the other to reach their own county Assistance office.

01:42:28.000 --> 01:42:31.000

So that's not a challenge we're going to solve today.

01:42:31.000 --> 01:42:41.000

But looking at the true big picture, what does it mean when you could only receive services through your home county, even though the base of those services is much further away.

01:42:41.000 --> 01:42:50.000

When I was working in the other county. it actually Touches 2 other States which complicates things, including Jennifer's, which complicates things even further.

01:42:50.000 --> 01:42:55.000

So lack of affordable housing. I know our first presenter really touched on that.

01:42:55.000 --> 01:42:59.000

You know the cost of rentals have gone way up around here.

01:42:59.000 --> 01:43:02.000

So. not only was it lack of affordable housing which we knew about now.

01:43:02.000 --> 01:43:09.000

The cost of those rentals has gone way up, and that just continues to perpetuate the problem.

01:43:09.000 --> 01:43:17.000

So all the rental assistance. in the world all the housing vouchers in the world mean nothing if there's no one who's willing to accept them.

01:43:17.000 --> 01:43:24.000

We've seen this through an equitable school funding that's a huge problem in the state of Pennsylvania, and worth looking into our 10 mile radius alone.

01:43:24.000 --> 01:43:29.000

We have 7 autonomous school districts, all of whom have different resources to bear.

01:43:29.000 --> 01:43:36.000

When the world went virtual it became very apparent which schools were the house and the have nots.

01:43:36.000 --> 01:43:44.000

So even those who were able to get the technology out there was there a digital device in terms of who could receive those services. Play this out a little bit further.

01:43:44.000 --> 01:43:50.000

You certainly see, telemedicine was an absolute blessing, particularly with the shortage of mental health providers.

01:43:50.000 --> 01:43:56.000

But again, for whom? who had access, who continues to have access to that moving forward.

01:43:56.000 --> 01:44:02.000

So. so we think around the term of refilling. Thank you.

01:44:02.000 --> 01:44:07.000

I think you brought up every vital condition and social determinant in that.

01:44:07.000 --> 01:44:19.000

So we we have about 10 min left, and I was hoping that everyone in the audience and everyone in the panel would think a little bit about to them.

01:44:19.000 --> 01:44:28.000

What recovery means. We know the pace and the quality of recovery is different for different individuals, different communities, and different systems.

01:44:28.000 --> 01:44:35.000

So maybe speaking from your primary place for about 1 min each.

01:44:35.000 --> 01:44:43.000

You know, John, like what is what is a reasonable timeline for how housing recovery, and and what does it look like if we get there?

01:44:43.000 --> 01:44:54.000

And I know that's a lot for 1 min yeah as I said, You know we don't want to recover to where we were pre-pandemic in the affordable housing world because it's not a good place

01:44:54.000 --> 01:44:56.000

it's not a good place just from a housing standpoint.

01:44:56.000 --> 01:45:12.000

It's certainly not a good place from health outcomes but people who live in substandard housing people who are chronically moving from place to place, children who have no stability live in much invested environments and and problems like

01:45:12.000 --> 01:45:24.000

that So you know we've got a we have to Do we have to you leverage this some way to get something better out of it, and I've worked on disaster recovery for many years.

01:45:24.000 --> 01:45:40.000

Because we've had multiple hurricanes in Texas and it is, there is a unique opportunity when the Federal government provides huge amounts of money and provides it as general grants to potentially to local governments.

01:45:40.000 --> 01:45:57.000

I mean, basically, if you are prepared to have a recovery plan in place, and if you are organized with A is a group of people who are advocates, and with the building from the community to make the case for the use of those

01:45:57.000 --> 01:46:10.000

funds. Then it's a unique opportunity, but you know the sad truth of the matter is, we go through multiple hurricanes, and we always start over from the very beginning.

01:46:10.000 --> 01:46:13.000

So, Donna, what is that look like for community financing?

01:46:13.000 --> 01:46:19.000

When will we be recovered. Yes, well, you know that's that's a \$64,000 question.

01:46:19.000 --> 01:46:24.000

It's a great we all know that certainly with Covid.

01:46:24.000 --> 01:46:28.000

We had both a health crisis and an crisis for community development.

01:46:28.000 --> 01:46:34.000

Financial institutions. Both of those are really important. you know.

01:46:34.000 --> 01:46:39.000

I talked earlier about. Clearly the approach is that have been sought to individuals with food programs.

01:46:39.000 --> 01:46:48.000

Jennifer and transportation, utility, reimbursement.

01:46:48.000 --> 01:46:58.000

Extensive and good advantage. Individuals have core health outcomes and will occur financially stable and upwardly mobile.

01:46:58.000 --> 01:47:08.000

How do we address the economic vulnerability in in as well?

01:47:08.000 --> 01:47:22.000

And I'll just very quickly in 30 s talk about a pilot program that's underway in the Delta region of the United States and class. Still, Mississippi I sit on the board of put in bank or which is a community

01:47:22.000 --> 01:47:28.000

Development financial institution in Arkansas, and they have recently launched a 2 year pilot.

01:47:28.000 --> 01:47:34.000

That really has commitments like Kvin Vancouver on E.

01:47:34.000 --> 01:47:48.000

Henry Clinic, quite still Mississippi I said a 2 year pilot that really working to create a model to integrate Cdfi economic inclusion services at the standard of care and a federally qualified health

01:47:48.000 --> 01:47:54.000

center for low income clients and Clarksdale, Mississippi.

01:47:54.000 --> 01:48:05.000

Clearly, this is an area that's marked by deep integrate integer and intergenerational poverty racial inequality across sectors that have negatively affected the health health outcomes.

01:48:05.000 --> 01:48:17.000

And so what these 2 entities are hoping to do is to identify, identify the root causes of that financial vulnerability.

01:48:17.000 --> 01:48:24.000

To be more financially secure by dividing the kind of support services that are needed.

01:48:24.000 --> 01:48:39.000

For those individuals that have been chronically underserved by the financial sector, but also in doing so, identify ways in which economic elevation can also improve health.

01:48:39.000 --> 01:48:47.000

They were recently featured at a form for the Clinton Global Initiative, where they are thinking commitment from

01:48:47.000 --> 01:48:53.000

Both the public and on this pilot project and again. It's not necessarily something that's going to happen overnight.

01:48:53.000 --> 01:49:00.000

We know that community economic development takes a long time in the right direction.

01:49:00.000 --> 01:49:15.000

When we look at those very vulnerable communities and look at ways that between can not only support people's economic advances, but also tie that into how health can also be improved along the way.

01:49:15.000 --> 01:49:21.000

And what is what does recovery look like for you how long does it take?

01:49:21.000 --> 01:49:23.000

I'm not sure, I believe that there is a real end state of recovery.

01:49:23.000 --> 01:49:32.000

That's clearly definable. So I think of these days post pandemic as recovery of kind of a process of continuous improvement.

01:49:32.000 --> 01:49:40.000

And I think some of the indicators, from a preparedness perspective that we can continue to look at.

01:49:40.000 --> 01:49:50.000

Are we actually improving upon the things that we saw as glaring vulnerabilities, and doing injury and harm to our community, to our providers, to our organizations?

01:49:50.000 --> 01:49:57.000

So are we making progress? Are we actively looking at the at the barriers, at the problems and trying to improve upon them?

01:49:57.000 --> 01:50:05.000

I would love to see legislators at all levels, holistically looking at the policy environment.

01:50:05.000 --> 01:50:18.000

So many of our solutions aren't gonna be tenable if we can't create a policy environment which we can really work across the continuum of health and actively and progressively ensure that people are getting the care they need at the

01:50:18.000 --> 01:50:24.000

right level of care, and that we are removing barriers to that, regardless of whether we're in a declared emergency or not.

01:50:24.000 --> 01:50:30.000

But that's really the philosophy we're driving towards you ask for a minute.

01:50:30.000 --> 01:50:37.000

I'll pass there but it's a continuous journey. so gala does that ring true for you in the rural setting?

01:50:37.000 --> 01:50:44.000

Have you talked a lot about your workforce pipeline that may reach a recovery point?

01:50:44.000 --> 01:50:49.000

Yes, and and I agree with the nora i'm not sure that there's a definable hi we've recovered now.

01:50:49.000 --> 01:51:02.000

Kind of period. But I, you know, in hospital we we show up every day and take your patients that come in, I think for us recovery is when we can figure out what did we learn, and how do we take that to approve what we do

01:51:02.000 --> 01:51:06.000

going forward. And how are we more prepared for whatever comes next?

01:51:06.000 --> 01:51:10.000

Because I agree with Mr. Brown, there will be a next something.

01:51:10.000 --> 01:51:19.000

And so for us, I think, for for recovery is just moving forward and and doing what we do.

01:51:19.000 --> 01:51:28.000

So, Janet, you talked about a lot of the inter woven issues in your communities.

01:51:28.000 --> 01:51:41.000

Any idea when we'll well recovery looks like there so I think I think it's not going to be linear it's not going to be one size fits all we need to figure out truly which communities weren't a part of the conversation

01:51:41.000 --> 01:51:45.000

and 2,019 may not have been a part of the conversation through the pandemic and start there.

01:51:45.000 --> 01:51:59.000

And that's where to put your dollars to put your resources to put your technical expertise and accept that resilience which is a term that we've been bantering around an awful lot you have to remember not everybody's starting from

01:51:59.000 --> 01:52:10.000

the same starting place. So resilience is really you know it's a you know it's a way of coping it's a mechanism, but it's not the solution that the solution is really setting setting things in place

01:52:10.000 --> 01:52:23.000

that are going to allow for a positive future, and sarah I didn't give you any heads up to do this, But i'm putting you on the spot for the last word, because I think you know maybe to to try in 1 min to explain what

01:52:23.000 --> 01:52:30.000

our systems, you know. level response to this is listen I agree with everyone on the pound.

01:52:30.000 --> 01:52:34.000

But i'm gonna put it to You and I think our timeline for recovery was yesterday.

01:52:34.000 --> 01:52:44.000

This is ridiculous. we're in the the most supported country in the world, and we should have better systems together.

01:52:44.000 --> 01:52:59.000

But instead, our public health system as monica said is in the in a stage of crisis management, we're trying to build this plane as we're flying it, and we need to be able to flexible nimble responsive and our ability to

01:52:59.000 --> 01:53:11.000

sustain whatever comes to us when if it's a another pandemic on another surge capacity events, you know we have lots of examples, and we have lots of models that we could follow.

01:53:11.000 --> 01:53:15.000

But yet we get things in our ways like like politics.

01:53:15.000 --> 01:53:20.000

And there's a way to use politics to to make sure our needs are met.

01:53:20.000 --> 01:53:27.000

But example, before this pandemic there was one before in 2,009 for H, one n one.

01:53:27.000 --> 01:53:32.000

We had system sometimes prepared, and people use those plans not only for H.

01:53:32.000 --> 01:53:40.000

One n one. But then, again, here in our pandemic for Covid 19, and that helped those businesses have some feeling of normalcy.

01:53:40.000 --> 01:53:45.000

When a public health expertise was scarce you know here in Florida.

01:53:45.000 --> 01:53:48.000

We're dealing with the aftermath of of hurricane?

01:53:48.000 --> 01:53:54.000

And what if we used a model like that? where we have our systems in place?

01:53:54.000 --> 01:54:02.000

We do this very well. There were working national in state local and communities coming together to help each other out.

01:54:02.000 --> 01:54:06.000

We can't just stay on the zoom calls hoping things are gonna be better.

01:54:06.000 --> 01:54:13.000

We have to be in person, hopefully masked, and doing all those wonderful things to protect

ourselves.

01:54:13.000 --> 01:54:16.000

But we have to be connecting, and we have to be involved.

01:54:16.000 --> 01:54:25.000

So doing those communications, and far more one more point I have to say we're all talking funding, but funding has to be lastable.

01:54:25.000 --> 01:54:29.000

It can't be a one-time size fits all as you said, Jennifer.

01:54:29.000 --> 01:54:39.000

Recovery is going to look different. No matter where we are in the country, and we've got to be able to make sure our our bucks are spent.

01:54:39.000 --> 01:54:50.000

Well for what our community needs. Thank you. So I think we had an important task to discuss some really big ideas in a really short amount of time.

01:54:50.000 --> 01:54:59.000

But I appreciate all the comments from the panel as we go into a break until 145 Eastern time.

01:54:59.000 --> 01:55:13.000

I want to remind everyone that is on the session that will be posting resources related to Long Covid, as it relates to a long-term issue for our community systems and a and a challenge to recovery which we

01:55:13.000 --> 01:55:18.000

didn't you know even have any time to address in in this particular panel.

01:55:18.000 --> 01:55:21.000

So we hope that you will take a brief break and

01:55:21.000 --> 01:55:26.000

Return in a few minutes to hear some of our panelists from the second session.

01:55:26.000 --> 01:55:56.000

Thank you so much.

02:01:18.000 --> 02:01:34.000

Welcome everyone. It is now 45 min after the hour whatever time zone you're in, and it's my pleasure to introduce the moderator for round table number 2 area to chicos in a word, of resilience

02:01:34.000 --> 02:01:37.000

Maven, and I want to hand this over to you area.

02:01:37.000 --> 02:01:46.000

Thank you. Thank you so much, Monica. I will. I would like to say thank you so much to our panel members and to everyone attending today.

02:01:46.000 --> 02:02:08.000

As we as we as we look at this very challenging issue of pandemic recovery, and explore together the the challenges we see with a spiritual and trauma subjecting that people have experienced at these

02:02:08.000 --> 02:02:16.000

last 2 years. So our our panel topic in general is, what do we need now to heal the collective wounds from the Covid?

02:02:16.000 --> 02:02:22.000

19 pandemic, and our speakers today are all thought leaders from spiritual trauma.

02:02:22.000 --> 02:02:38.000

Recovery and restorative justice traditions and they'll address How the pandemic recovery process can incorporate practical strategies embedded in our daily lives in our civil society and governments so that together we can

02:02:38.000 --> 02:02:45.000

address the existential wounds inflicted since the covid 19 virus has emerged.

02:02:45.000 --> 02:02:53.000

I want to share the prompting questions that we sent out to our speakers today, and then i'll introduce them.

02:02:53.000 --> 02:03:00.000

As they're posted on the agenda and we'll take our speakers in the order of the program itself.

02:03:00.000 --> 02:03:16.000

So the first topic that was sent out to our colleagues to discuss was, we asked them to speak today about their from their area of expertise, what forms of release, relief, and caretaking that we all need now to ease the inner

02:03:16.000 --> 02:03:21.000

damages inflicted by the pandemic, especially in hard hit communities.

02:03:21.000 --> 02:03:31.000

And so we will talk about what practical steps that local leaders can take going forward to schedule up, or even introduce healing modalities.

02:03:31.000 --> 02:03:45.000

And then look at how we can measure the success of these interventions as we go forward to see if we really are making a dent in the pandemic related, emotional and spiritual distress of our communities.

02:03:45.000 --> 02:04:03.000

And secondly, we ask people to consider these larger issues that so many of our speakers earlier today spoke about starting with Do Brown to look at the issues of racism, political strife, and social fragmentation that have amplified

02:04:03.000 --> 02:04:10.000

the collective trauma associated with the many and uneven numbers of Covid.

02:04:10.000 --> 02:04:21.000

19 cases, hospitalizations and deaths. What sources can our communities consider as they look to find common ground and develop and nurture?

02:04:21.000 --> 02:04:36.000

A sense of shared values as we go forward. And how can local community leaders use these sources to promote healing from the particulars of the pandemic, and then look forward to future disruptions?

02:04:36.000 --> 02:04:49.000

As we all discussed earlier, that are probably before us sooner than we might think so today. our panel is consists of renowned and respected leaders from around the country.

02:04:49.000 --> 02:04:55.000

We will open with Reverend Anthony Evans, who is the president of the National Black Church Initiative.

02:04:55.000 --> 02:05:06.000

He will be followed by Brian Flynn, his associate director of the Center for the study of traumatic stress in the Uniform Service University.

02:05:06.000 --> 02:05:16.000

From there. Deborah Pennell, who is the senior, medical and forensic advisor and editor-in-chief for the National Association of State Mental Health Program directors.

02:05:16.000 --> 02:05:30.000

She will. he she will be followed by Jennifer Llewellyn, who's the director at the Restorative Research Innovation and Education lab Ibu Patel will be up next who is president of

02:05:30.000 --> 02:05:38.000

interfaith America, and we will close with Rabbi Deborah Waxman, who is the president of reconstructing Judaism.

02:05:38.000 --> 02:05:42.000

So, Reverend Evans, will you lead the way in our discussion?

02:05:42.000 --> 02:05:51.000

Thank you. Sure it is an honor to be here, and certainly without distinguished panels as well as hosts.

02:05:51.000 --> 02:06:03.000

So thank you for this opportunity to reflect on what is consider a life-changing situation in our society dealing with Covid, and it's after effect.

02:06:03.000 --> 02:06:12.000

Well, let me just first of all lay the foundation of where I set, so that you would understand my perspective.

02:06:12.000 --> 02:06:31.000

I am the president of the National Black Church Initiative, which is a 150,000 African-american faith communities with 27 point, 7 million African American Church Gores, about half of the 42 million that African

02:06:31.000 --> 02:06:50.000

American people in this country, given that perspective, and haven't been involved with Covid since December of 2,019, and wrote a a paper outlining what are going to be the randomifications of covid given

02:06:50.000 --> 02:06:58.000

the fact that underlying communities were often overlooked.

02:06:58.000 --> 02:07:05.000

We saw that very clearly. We tried to contact the White House, and that was literally impossible.

02:07:05.000 --> 02:07:25.000

I will contacts. even within our structural organization, such as the National Medical Association, the and also the Naacp and other Civil Rights organization, really did not have the necessary relationships.

02:07:25.000 --> 02:07:33.000

At the time of this pandemic with the White House as they have now today under the Biden administration.

02:07:33.000 --> 02:07:39.000

So you can. So we were. a community was at a disadvantageded

02:07:39.000 --> 02:07:45.000

And in terms of our relationship, and that stem for

02:07:45.000 --> 02:07:49.000

Speak to what we have pointed out for years in our community.

02:07:49.000 --> 02:07:57.000

We cannot ever consider ourselves or democrats. rather we like it or not.

02:07:57.000 --> 02:08:01.000

But the White House looked at that and looked at that as a political statement.

02:08:01.000 --> 02:08:13.000

Therefore we were last to be served for political reasons. We were last to reserve for racial reasons, and we were last to be served because we were a a major voting block.

02:08:13.000 --> 02:08:20.000

That was not in tune. Politics had a central way entering into Kovat.

02:08:20.000 --> 02:08:25.000

If you can deny that all you want, and then you will get nowhere in America.

02:08:25.000 --> 02:08:36.000

If you, too, So, given that disadvantage, we we had no other choice but to force the White House to look at us, to look at our plans, to hear us.

02:08:36.000 --> 02:08:51.000

Well, what we found out was stunning. What we sound out is a healthcare system, not not only where they were that had ratio, structural and historic barriers.

02:08:51.000 --> 02:08:58.000

We found out a a healthcare system that was resistant to

02:08:58.000 --> 02:09:04.000

Any suggestion that we had any answer whatsoever about our own communities.

02:09:04.000 --> 02:09:12.000

And I point that out because we wrote a comprehensive plan for our country in terms of what my brother Dr.

02:09:12.000 --> 02:09:17.000

Brown spoke of in terms of a democracy, a reconstruction democracy.

02:09:17.000 --> 02:09:35.000

We wrote a comprehensive plan, outlining how to educate, vaccinate, and handle a 109 million Americans, which is about one third black and Latinos for all of the governors.

02:09:35.000 --> 02:09:38.000

And every State. we send it to the Governor.

02:09:38.000 --> 02:09:41.000

We send it to the Chief of Staff, so that the governor can get it.

02:09:41.000 --> 02:09:53.000

We send it to the head of the State Health Agency, whatever that constituted in that particular State, and we sent it to the Social Services director.

02:09:53.000 --> 02:10:01.000

We got some inquiries, and we held a few zoom call, but nothing really happens.

02:10:01.000 --> 02:10:13.000

So where are we now? Well, in the African American community, and especially in the religious community, we have 25,000 dead pastors.

02:10:13.000 --> 02:10:23.000

And those are numbers that we can glean from from our own data collection, and how we count

02:10:23.000 --> 02:10:38.000

That situation. Now, of course, those numbers and data is inaccurate, and they are inaccurate because we could not rely on the State dashboard because they didn't break the data down by race so it totally took us

02:10:38.000 --> 02:10:43.000

over a year to get to some sort of understanding of the impact.

02:10:43.000 --> 02:10:49.000

Cool. Covid will have on just the religious leadership of the African American community.

02:10:49.000 --> 02:10:54.000

I'm not talking Latino community, but only talking African American.

02:10:54.000 --> 02:10:58.000

We closed about 25, I think we could be a little bit more accurate in the churches.

02:10:58.000 --> 02:11:09.000

We closed about 25,000 churches. those those were still front churches that would not have survived, and any economy, especially in the covid economy.

02:11:09.000 --> 02:11:16.000

We also suffer disproportionately about the access to the vaccine.

02:11:16.000 --> 02:11:30.000

Once the vaccine was ready again by the state leaders and It has nothing to do with the Federal Government by the State leaders who was empowered, and a lot of people don't understand this.

02:11:30.000 --> 02:11:37.000

It was not Hhs who ran this particular covid experience it's not true.

02:11:37.000 --> 02:11:42.000

It's the State who ran the covid an issue and it?

02:11:42.000 --> 02:11:48.000

That's why it's very radically from state to state I remember very specifically.

02:11:48.000 --> 02:12:07.000

They deal that then President Trump made with those governors and I will try our interaction with the Governor's association was tragic to the fact that none of our national officiations will work with the governor's association going

02:12:07.000 --> 02:12:14.000

forward. That is not my perspective. That is our national denominational perspective.

02:12:14.000 --> 02:12:23.000

Over 37. We try to sit down with them to reason that we had a plan that they needed to make serious investment into the church structure.

02:12:23.000 --> 02:12:32.000

And if you notice about any of the situation that happened, the church came last.

02:12:32.000 --> 02:12:45.000

We came last to the rest of the State, all of us, all of a sudden the State recognize that the way to get to the people that they need the seniors, the homeless, and the disabled

02:12:45.000 --> 02:12:53.000

Those who were homebound was only through the State, and I blame that strictly on the State leadership.

02:12:53.000 --> 02:13:11.000

Because, remember, if you are the State Director of Health, you have a lot of power apparatus, and specially because the Governor of your State invested totally in you, and if we can that need to be an examination of all

02:13:11.000 --> 02:13:17.000

of our State leaders before and after Kovat, and in terms of our health care.

02:13:17.000 --> 02:13:32.000

I am not blaming them per se as individuals i'm i'm, hiding them as an agency that the agency itself did not have adequate plans and information for instant the agency did not know how

02:13:32.000 --> 02:13:38.000

many people were in this state, they only had it. They only go to the senses they go to when they went to the Us.

02:13:38.000 --> 02:13:45.000

Census, but they did not have command over that. They did not know where the poor were located.

02:13:45.000 --> 02:13:49.000

Even in their state brothers rule or urban. And this is what Dr.

02:13:49.000 --> 02:14:00.000

Brown pointed out earlier about the the Black Belt, the affiliation belt, the northeast belt, the tribal belt.

02:14:00.000 --> 02:14:10.000

They did not know those communities, because every health care worker agreed that those communities should be served first.

02:14:10.000 --> 02:14:15.000

And let me report to you right now, 2 and a half years later.

02:14:15.000 --> 02:14:33.000

Those communities are still not served today. We cannot account you cannot account for every single African, American and Latino senior has the vaccine that is, that cannot be counted, and that is a tragic point of our nation's history

02:14:33.000 --> 02:14:44.000

so, even when the Church was not upon the overall structural plan of the State cause, it was, it was a State ran situation.

02:14:44.000 --> 02:15:03.000

The the governors took full control, and I want to point out something that happened that the Governor should not be well respected for, and that they First they took the first Covid vaccine. that was given to their State, and they did not give It to

02:15:03.000 --> 02:15:06.000

the poor. they did not give it to the vulnerable.

02:15:06.000 --> 02:15:12.000

They gave it to their friends, and they give it to their neighbors, and they give it to the well connected.

02:15:12.000 --> 02:15:31.000

So as the Church leader. it is my moral authority to tell a nation that that is unacceptable move forward and dealing with any pandemic going forward, and that not only do we need a complete reconstruction dr brown

02:15:31.000 --> 02:15:40.000

call is a reconstruction of democracy i'm not going that broad, because I do not believe that this country is ready for any radical change.

02:15:40.000 --> 02:15:48.000

I have the stomach for any radical change i'm just simply asking for State leaders.

02:15:48.000 --> 02:16:09.000

State legislators and others to consider a reconstruction plan by those individuals, and not counting myself who serve on this panel and other panels, who clearly understand the science and the data that will move us to a point whereby

02:16:09.000 --> 02:16:15.000

we have an equitable plan and a democracy of health in this country.

02:16:15.000 --> 02:16:25.000

For the first time, excuse me i'm gonna thank you for that amazing opening.

02:16:25.000 --> 02:16:28.000

We're going to segue to our other panelists, and then we'll get back into our discussion.

02:16:28.000 --> 02:16:37.000

So our next speaker is Brian Flynn who's with the uniform Service University Brian.

02:16:37.000 --> 02:16:48.000

Thank you very much. I need to begin my conversation with you with a disclaimer that what you're going to hear me talk about today.

02:16:48.000 --> 02:16:56.000

Really reflects my own perspective on the topic, and not those of the uniform Services University.

02:16:56.000 --> 02:17:07.000

The Jackson Foundation of the Department of Defense. I think our previous presenters have done a good job in expressing the complexity of of Covid.

02:17:07.000 --> 02:17:12.000

I think we really have a quandary with Covid response and and recovery.

02:17:12.000 --> 02:17:20.000

And that is that it really occurs in the context of so many other stressors.

02:17:20.000 --> 02:17:31.000

We are in the middle of an economic crisis Questions about civil unrest and criminal justice, political upheaval, natural disasters.

02:17:31.000 --> 02:17:41.000

There's a number of things going on so we can't afford the luxury of just looking at Covid, as some of our presenters have have indicated.

02:17:41.000 --> 02:17:54.000

It's much more complicated than that. and one of the biggest complications, I believe, is that the interactive effects of all of these stressors has really caused us to challenge our values.

02:17:54.000 --> 02:17:59.000

What does it mean to care? What does equity look like?

02:17:59.000 --> 02:18:15.000

What does justice look like? What does connectedness look like and I think we know far too little about the interactive effects of all these issues and the duration, and I suspect that we'll be dealing this with this through generations

02:18:15.000 --> 02:18:20.000

rather than issues. So the the lens through which I approach.

02:18:20.000 --> 02:18:30.000

This. This topic is is a little bit unique. My academic training is in clinical psychology and mental health administration.

02:18:30.000 --> 02:18:35.000

My occupational history has a lot to do with disaster.

02:18:35.000 --> 02:18:52.000

Response of many different types. So that's the the lens through which I I speak, and I want to share some things that I think I've learned doing that kind of work over many years when we think about behavioral health our

02:18:52.000 --> 02:18:59.000

mental health disaster, mental health. our default setting is usually clinical, providing counseling services.

02:18:59.000 --> 02:19:06.000

Treatment for mental disorders etc. that is critically important, and it's a big issue in the recovery from call it.

02:19:06.000 --> 02:19:12.000

But I don't want to focus on that today because I think what I have to add.

02:19:12.000 --> 02:19:17.000

Probably is more relevant to the more public health aspects of behavioral health.

02:19:17.000 --> 02:19:25.000

And that is, thinking about this broadly, about how individuals and communities process information, how they make behavioral choices.

02:19:25.000 --> 02:19:34.000

We adapt to change, and how we individually and collectively grieve our losses and and and

changes.

02:19:34.000 --> 02:19:48.000

So i've had been in the field for a long time, and I've had a chance to look back, and I wanna share with you a few things that I think are consistent among virtually every disaster.

02:19:48.000 --> 02:20:00.000

I've been involved with There seem to be factors that either make or break the response, and recovery regardless of how much damage there is.

02:20:00.000 --> 02:20:13.000

How many resources there are from recovery. there's some common things that make or break that. And i'm going to lead those into some things that we might specifically do. One of those factors is leadership.

02:20:13.000 --> 02:20:31.000

I have seen response and recovery made or broken by good leadership, and I'm talking about general leadership organizational leadership, formal, informal, through a wide variety of of organizations the other is communications.

02:20:31.000 --> 02:20:44.000

If I had one tool in my belt it would probably be to be able to communicate effectively with people in a response in a recovery period, providing people with information that they understand.

02:20:44.000 --> 02:20:52.000

That's meaningful to them and that's presented in a way they can retain and can act. upon. There's a science.

02:20:52.000 --> 02:21:01.000

To this, and it is risk and crisis. Communication is different than general communication, and the third issue is culture. talk.

02:21:01.000 --> 02:21:08.000

We can talk about general culture. We can talk about occupational culture, organizational culture.

02:21:08.000 --> 02:21:13.000

Most of what I do these days is is organizational consultation.

02:21:13.000 --> 02:21:22.000

I talk frequently about the culture of an organization people know whether they're working for an organization that cares for them or not.

02:21:22.000 --> 02:21:32.000

And so thinking about the role of culture, and what the culture can do to help us, or might do to hinder us.

02:21:32.000 --> 02:21:50.000

So what can we do? One of the things we might do is go back to the foundation and of psychological first aid, and I've provided some resources for that, and those 5 elements that constitute that our sense of safety promoting

02:21:50.000 --> 02:21:57.000

calmness, sense of self efficacy, and that would include collective efficacy.

02:21:57.000 --> 02:22:02.000

I would I would promote, and also a sense of hope.

02:22:02.000 --> 02:22:10.000

So one of the things that I would recommend for people active in this field is to take a look at what you do as leaders.

02:22:10.000 --> 02:22:16.000

What we do as leaders, what our behavior is, what are the things that we write?

02:22:16.000 --> 02:22:20.000

Were the actions that we take? How do we communicate?

02:22:20.000 --> 02:22:34.000

What do we communicate? and measuring all of those against whether they help or hinder the promotion of those 5 foundations of of psychological first aid?

02:22:34.000 --> 02:22:42.000

Just a one comment about some other things that I don't want us to forget.

02:22:42.000 --> 02:22:49.000

I've also learned in my career that in a crisis situation.

02:22:49.000 --> 02:22:53.000

The the written and spoken word fails us very frequently.

02:22:53.000 --> 02:23:04.000

And I think we need them to turn to symbols and rituals in order to cross cultural lines, to promote our shared suffering and recovery.

02:23:04.000 --> 02:23:11.000

And I think the faith community in the military community probably know a lot more than behavioral health in that regard.

02:23:11.000 --> 02:23:18.000

I also, would like to just make a comment about moral discomfort, distress, and injury.

02:23:18.000 --> 02:23:33.000

It's been mentioned before, I think that is a factor that's getting more attention, but needs more attention, as we go forward, and considering what people have experienced, and what that means and my final statement in in a group of

02:23:33.000 --> 02:23:48.000

like-minded people like this is to never lose sight of the fact that there are those who don't share our values, that there are those who do not want healing to take place, who want fragmentation, promoted want

02:23:48.000 --> 02:23:53.000

conflict, societal discord promoted, and we have to be ever vigilant of that.

02:23:53.000 --> 02:23:58.000

So. with that I will stop and say, Thank you. Thank you so much, Brian.

02:23:58.000 --> 02:24:01.000

Next Our next speaker is Deborah Pennsylvania.

02:24:01.000 --> 02:24:10.000

Give us your wisdom, Debra. Thank you. Yeah, Well, thank you first of all, very much for inviting me to speak on behalf of Nashville.

02:24:10.000 --> 02:24:27.000

The National Association of State Mental Health Program Directors, and just by way of context, that organization represents 7.5 million people who are served by the public behavioral health system and all 50 States for Territories in the District of

02:24:27.000 --> 02:24:43.000

Columbia and The mental health leaders in in each State which have been referenced already, have really had much to learn from this covid pandemic, which I think we can take stock in and move forward as we

02:24:43.000 --> 02:24:56.000

look towards what they call pro traumatic growth Having recognized that we can't change what happened, and some of the very painful lessons that had that were learned.

02:24:56.000 --> 02:25:14.000

But we can learn from those lessons and move forward so I think leaders in behavioral health have a real opportunity to help make changes, so that if there were another pandemic or at any point where there's a disaster we

02:25:14.000 --> 02:25:23.000

can continue to improve upon the response. And one thing that was already mentioned is really focusing on building an infrastructure of support.

02:25:23.000 --> 02:25:28.000

The infrastructure of support was not ready for Covid.

02:25:28.000 --> 02:25:34.000

19. We know that in the behavioral health system we had done so much planning for other kinds of endemics.

02:25:34.000 --> 02:25:40.000

We had done planning for natural disasters of a sudden nature.

02:25:40.000 --> 02:25:45.000

Our system are required to have plans for continuity of operations.

02:25:45.000 --> 02:25:49.000

But yet, when the pandemic hit, there were many things that we were blindsided by.

02:25:49.000 --> 02:26:03.000

For example, we saw that our behavioral health system was not equipped with personal protective equipment proportionate to other systems and other entities.

02:26:03.000 --> 02:26:17.000

We know that the intersectionality of race poverty. now illness creates all sorts of multiple layers of disparities, and some of the disproportionate impact on our populations with getting covid 19 and succumbing to

02:26:17.000 --> 02:26:31.000

Covid 19 we saw fairly quickly. And so one of the things that we, I think, have an opportunity to do is learn through this disaster.

02:26:31.000 --> 02:26:36.000

Behavioral health experience how to ensure a better infrastructure.

02:26:36.000 --> 02:26:51.000

We worked with our provider community to help learn from them what their needs were, so that they could support people with incredible vulnerabilities in our communities. and I think we need to learn from that.

02:26:51.000 --> 02:27:04.000

I'd also like to say that we have a real opportunity to lift up the voices of people who have lived experience, who have suffered, but pursued and demonstrated resilience in that perseverance.

02:27:04.000 --> 02:27:21.000

The substance abuse of mental health services. Administration, for example, has elevated the voice of people with lived experience by highlighting a new office of recovery which, which really focuses on having people who in the peer community be able to

02:27:21.000 --> 02:27:27.000

have a real seat at the table on policy development and organizational change.

02:27:27.000 --> 02:27:42.000

At Nashville. We have many peer members in our staff as well, but give advice and technical assistance to the States, and I think by lifting up the voices with lived experience, with mental health issues substance use issues and other

02:27:42.000 --> 02:27:51.000

challenges. we can really help build that infrastructure in a way that will meet the needs of the populations that we're trying to serve.

02:27:51.000 --> 02:28:07.000

Behavioral health leaders also have an opportunity. We we found ourselves in a position to not only shore up the capabilities of our service providers and ourselves, but as as we were trying to ensure that the people, we serve those with serious mental

02:28:07.000 --> 02:28:13.000

illness and youth, with serious emotional disturbances, were also served well.

02:28:13.000 --> 02:28:19.000

So in terms of taking care of ourselves, so that we can take care of the vulnerable members of our society.

02:28:19.000 --> 02:28:24.000

I think we have opportunities for that we're also working hard building out a crisis.

02:28:24.000 --> 02:28:44.000

Care continuum the The initiation of 9, 8 8 in July of this year allows for a brand new opportunity for suicide, prevention, and crisis response to all people and all walks of life talking through phone or

02:28:44.000 --> 02:28:48.000

chatting by text, and through that 9, 8, 8 initiative.

02:28:48.000 --> 02:29:02.000

Our behavioral health leaders are working hard to make sure that when there is a crisis on an individual level or on a larger level, that there are people to respond, and that response is going to meet the needs of different populations.

02:29:02.000 --> 02:29:13.000

So the crisis continuum with 9, 8, 8, and then looking at building out mobile crisis services and other response systems, is going to be incredibly important.

02:29:13.000 --> 02:29:23.000

Again. From the pandemic we learned that Americans were able to articulate that they were suffering and suffering greatly from mental health conditions.

02:29:23.000 --> 02:29:36.000

People came out we had a household pulse survey that every 2 weeks provided data on the levels of depression and anxiety that people were reporting, and fully a third to 40% at different times.

02:29:36.000 --> 02:29:41.000

Sometimes more. we're experiencing real symptoms of anxiety and depression.

02:29:41.000 --> 02:29:55.000

So by having this 98 response and recognizing the importance of putting out in front mental health issues as part of public health, I think leaders have a real opportunity for growth and development of resources.

02:29:55.000 --> 02:30:00.000

It also allows a more frank conversation with hopefully reduced stigma.

02:30:00.000 --> 02:30:09.000

Unfortunately, the surveys show that the stigma pertaining to mental illness persists. despite being able to talk about mental well-being and mental health.

02:30:09.000 --> 02:30:17.000

It is still very difficult to talk about and acknowledge mental illness in a real and meaningful way, like we do with medical conditions.

02:30:17.000 --> 02:30:24.000

But through this covid 19 experience we may have opportunities you're on mute.

02:30:24.000 --> 02:30:30.000

But I think you may be telling me

02:30:30.000 --> 02:30:36.000

Those were illuminating comments, that we're going to move on, but we'll have chance we'll circle back together.

02:30:36.000 --> 02:30:43.000

We're done with our questions our next speaker is Jennifer Llewellen Jennifer Hi!

02:30:43.000 --> 02:30:59.000

It's a it's a pleasure to be with you it's such an incredibly rich and and inspiring opportunity to hear from our keynote and from panelists earlier and now my co-panelists i'm coming to you from from

02:30:59.000 --> 02:31:14.000

Canada, and and as as part of your North American contingent, deeply committed to thinking about these solutions in in the context in which I live, and in the communities in which I work internationally and and and in the us, so

02:31:14.000 --> 02:31:18.000

so humbling and and exciting to be able to to be with you.

02:31:18.000 --> 02:31:38.000

Today. I wanted to talk a little bit about in response to your question how it is that we understand the sort of needs for this build back fair and and more adjust from the perspective of the work that I do in restorative justice both sort of domestically where

02:31:38.000 --> 02:31:55.000

you all might be more familiar with restorative justice alongside, or as part of the criminal justice system as sort of these alternative justice processes or otherwise, within communities that sort of an individual level supporting interpersonal the recovery from

02:31:55.000 --> 02:32:11.000

interpersonal harms or those sort of inner inner terms that we that we do on when we cause harm to one another, and sort of raise the potential for the work that's being done in communities and in systems around

02:32:11.000 --> 02:32:29.000

restorative justice to support us in this time, as we try to think about what sorts of processes and and and opportunities do we need to tap into, as we try to understand and confront and respond to the harms that

02:32:29.000 --> 02:32:34.000

that and impacts of the pandemic as we've heard about on this mornings.

02:32:34.000 --> 02:32:51.000

I guess, boring for me. Maybe this afternoon for others. this morning's panel, and and also to think about How do we understand this idea of justice and the processes that might support this these kinds of justice responses for some of the

02:32:51.000 --> 02:32:57.000

proactive and prevented work that we need to do if we're going to be move towards a more just future.

02:32:57.000 --> 02:33:06.000

If we're going to learn some of the lessons that have been presented and revealed to us in this pandemic time.

02:33:06.000 --> 02:33:21.000

And so I kind of want to share our thinking about how we might look at those processes and and programs and folks in our various communities and systems that have worked on restorative justice to really see their potential as not just a set of

02:33:21.000 --> 02:33:30.000

practices that are useful in the legal system, or that are only responsive information to harm, although certainly they can be that.

02:33:30.000 --> 02:33:37.000

But that have the seeds for opening our eyes to the kind of idea of justice we need to support recovery.

02:33:37.000 --> 02:33:53.000

And so I approach restorative justice, and look to these various kinds of programs and and examples and experiments with restorative justice, as really telling us about what justice requires in a different way.

02:33:53.000 --> 02:34:09.000

This sort of idea of justice, as about just relations, and thinking about that, not only at a an interpersonal level, or at a at an individual level, but sort of all the way up or down, or out, depending on how you how you draw the

02:34:09.000 --> 02:34:18.000

the pictures of the ways in which we live, in context and systems and institutions and structures, and the way that they impact.

02:34:18.000 --> 02:34:22.000

How we feel about ourselves, how we interact with others and how we are.

02:34:22.000 --> 02:34:28.000

Then in relationship, at at group and community and societal way.

02:34:28.000 --> 02:34:34.000

And so if if that's the invitation that's seeing justice differently.

02:34:34.000 --> 02:34:41.000

If that's the invitation that restorative justice has for us to sort of look at the demands for justice.

02:34:41.000 --> 02:34:57.000

As about this relational work, then I think we can make sense of how restorative justice programs and processes and initiatives allow us to glimpse how we could do this work of justice differently, by calling people in rather than the

02:34:57.000 --> 02:35:18.000

more divisive work that justice sometimes does of calling people out, of being able to react and respond when harm has happened, but also to be able to think proactively about. How do we build sort of these just relations built on care and respect and

02:35:18.000 --> 02:35:33.000

mutual concern. How do we do that? In all of the places and spaces in which we we work, we live, we learn, we play, we pray, and faith communities, and and also in the places that we turn for help and care.

02:35:33.000 --> 02:35:46.000

And so I I wanted to suggest a sort of a concrete place that communities might look to begin to scale up our responses, to look at restorative justice in 2 ways.

02:35:46.000 --> 02:35:58.000

One is to really face this challenge that we're that this Panel and others are beginning to contribute to where we can sit and hear first voices and impacts where we can really deeply, as Dr.

02:35:58.000 --> 02:36:14.000

Brown suggested to us listen which is core to democracy and inclusion and participation, but also then understand one another's experiences and perspectives sort of look back, not to blame or to or to identify accountability in that

02:36:14.000 --> 02:36:29.000

backward-looking way, but to look back in order to be able to look forward and plan together and the way we do that really needs to be attentive to the kinds of relationships we need to be building through that process to be able to

02:36:29.000 --> 02:36:41.000

be different in future. So I think here of some of the initiatives around truth and reconciliation commissions we could learn from in South Africa, in Canada, and some of the movements in the Us.

02:36:41.000 --> 02:36:48.000

Around racial justice, and I think here about some of those review processes where harm has happened.

02:36:48.000 --> 02:37:00.000

But the other thing, and as I close i'll just say is look, I think we also need to think proactively about how to bring a restorative approach to the ways we do things that every day.

02:37:00.000 --> 02:37:15.000

There are great examples in the restorative communities movement that could be scaled up in Oakland, California, led by our joy. Restorative justice for Oakland Youth in Camera Australia, in my own home province of Nova

02:37:15.000 --> 02:37:22.000

Scotia, where they're at in leads the uk where we're really starting to think about who and how do we need to be as a community?

02:37:22.000 --> 02:37:32.000

And then I think about how that can show up in workplaces, in schools, in faith, communities, not only when harm happens, but to make sure that things go right more often.

02:37:32.000 --> 02:37:45.000

And so I I I kind of want to leave us with this idea that these sorts of processes, if we prioritize them in building relationships, can provide us the opportunity to build building.

02:37:45.000 --> 02:37:50.000

Now the relationships we wish and we know we need it in order to be safe.

02:37:50.000 --> 02:37:53.000

And well and healthy when the pandemic hit.

02:37:53.000 --> 02:38:03.000

And so I'll. leave it. there thank you so much Our next speaker is Ebu Patel, who's with interfaith America.

02:38:03.000 --> 02:38:07.000

Good afternoon, friends. My name is Eve Patel.

02:38:07.000 --> 02:38:10.000

I am the partner president of an organization called inter-paid America.

02:38:10.000 --> 02:38:21.000

It's the Nation's largest organization that positively engages religious diversity or kind of tagline is that they thought it would be a bridge of cooperation, and not a barrier of division so we

02:38:21.000 --> 02:38:31.000

ran a pretty large program over the course of the early months of the vaccine, which indicated the power of its engaging faith.

02:38:31.000 --> 02:38:46.000

Positively to improve help outcomes. i'll say that one more time, because that's kind of the the headline of what I want to to articulate here, which is the positive and proactive engagement of faith identity can very

02:38:46.000 --> 02:38:50.000

often lead to improved health outcomes. Now put this in colloquial terms.

02:38:50.000 --> 02:39:04.000

There are. there are segments of segments of our population, who, if told by a doctor, let's say, to change their dying for health, reasons, may not listen.

02:39:04.000 --> 02:39:22.000

But if told by a pastor to change their diet for spiritual reasons, the exact same tactics just articulated in the different framework. Let's do a Daniel fast, for example, they are much more liable to do we ought to take this.

02:39:22.000 --> 02:39:32.000

very seriously for health issues, and we saw this actually during the the early months of that of of the vaccine.

02:39:32.000 --> 02:39:50.000

So my organization interface America, along with a leading survey organization called the Public Religion Research Institute, did a series of large scale surveys to get a sense of how Americans, how Americans faith impacted how they viewed the vaccine specifically

02:39:50.000 --> 02:39:56.000

whether a faith intervention would encourage them to get the vaccine.

02:39:56.000 --> 02:40:05.000

It turns out that a third of a American said that they would be positively influenced by some sort of simple fake intervention.

02:40:05.000 --> 02:40:10.000

Their pastor, or mom, or Rabbi talking about this in their bait community.

02:40:10.000 --> 02:40:23.000

A town hall held in their church to discuss the Covid vaccine, and that vaccine clinic taking place in their mosque Bible versus or prayer, being said while they were getting the vaccine a third

02:40:23.000 --> 02:40:33.000

of Americans said that this would make a difference in them in what and whether they would consider getting the vaccine very important segments African, Americans and Latinos.

02:40:33.000 --> 02:40:42.000

Over 50% of black Protestants who got the vaccine said that a some kind of a fake intervention made a difference.

02:40:42.000 --> 02:40:47.000

Their pastor, saying it was important they're they're they're church hosting the vaccine clinic etc.

02:40:47.000 --> 02:40:51.000

This is not going to surprise Reverend Evans at all who spoke about this at the beginning.

02:40:51.000 --> 02:41:01.000

Over 40% of with Latino Catholics said that some kind of a fake intervention encourage them to get the next thing.

02:41:01.000 --> 02:41:04.000

So at my organization interfate America i'll put these links in the chat.

02:41:04.000 --> 02:41:13.000

We took this data, and we developed a program around it called the Faith and the Vaccine Ambassadors.

02:41:13.000 --> 02:41:26.000

I wanna spend a minute in this program, because not only do I think it is highly scalable, but I think that this kind of effort should be a permanent part of our health infrastructure a permanent part of our health

02:41:26.000 --> 02:41:36.000

infrastructure not just when there's a plate not just when there's a pandemic not just when they're we're rolling out of a vaccine but I we should have a layer

02:41:36.000 --> 02:41:45.000

of community health ambassadors in our country who are comfortable and fluent, engaging religious identity.

02:41:45.000 --> 02:41:53.000

This can be as simple as saying to somebody: Remember the Biblical belief that your body is a temple of the Holy Spirit.

02:41:53.000 --> 02:42:01.000

Remember the the Islamic concept of Moneylaha, of the common good protecting your neighbor.

02:42:01.000 --> 02:42:13.000

One of our ambassadors. pointed out that he got his Coptic Christian, Egyptian immigrant parents to get the vaccine.

02:42:13.000 --> 02:42:18.000

When he reminded them that the communion cup in Coptic churches is common.

02:42:18.000 --> 02:42:23.000

Everybody drinks from the same cup, and that unless everybody was vaccinated.

02:42:23.000 --> 02:42:31.000

They couldn't return to a common community It was a faith articulation that encouraged that kind of vaccination.

02:42:31.000 --> 02:42:47.000

So we, along with a set of sociologists, medical experts and theological, developed a curriculum called the Faith. In the vaccine curriculum we recruited ambassadors from 200 institutions 110

02:42:47.000 --> 02:42:51.000

campuses and 90 congregations and faith based institutions.

02:42:51.000 --> 02:42:56.000

We paid stipends to the lead recruiter in each of those institutions.

02:42:56.000 --> 02:43:05.000

A faculty member for the course of the summer, and for students and for congregants in the

in churches, and we mobilized over the course of the summer.

02:43:05.000 --> 02:43:19.000

In the fall these folks and that vaccine ambassadors to be advocates for the vaccine in ethnic, religious, and racial communities, to hold those town halls and churches, to speak to congregations

02:43:19.000 --> 02:43:23.000

and and and folks in communities about their bodies being the temple of the Holy Spirit.

02:43:23.000 --> 02:43:35.000

It was a highly successful intervention, the highly successful intervention so successful, in fact, that we're building an entire program at Interfaith America called the Faith that Health Program.

02:43:35.000 --> 02:43:40.000

To further explore and lift up and scale this kind of work.

02:43:40.000 --> 02:43:47.000

The positive engagement of faith can improve health outcomes I'll put a set of links in the chat for everybody to see.

02:43:47.000 --> 02:44:00.000

Thank you so much for that amazingly positive sharing and our final speaker is rabbi Deborah Waxman forever.

02:44:00.000 --> 02:44:09.000

It's so powerful to be here with everyone and this extraordinary panel, and I'm gonna I hope complement what what what the other panelists have said.

02:44:09.000 --> 02:44:24.000

I'm going to speak from a particular tradition I'm going to draw on Jewish wisdom, and practice with the aim of raising up some universal insights for this complex and challenging moment a Jewish response to

02:44:24.000 --> 02:44:35.000

the questions that were proposed sits at the intersection squarely of the theological and the sociological, of the transcendent and the supremely practical.

02:44:35.000 --> 02:44:40.000

See sociologically, Judaism teaches that every so this is I.

02:44:40.000 --> 02:44:44.000

I hope, a good example of some of what what? what you know.

02:44:44.000 --> 02:45:00.000

Patel was just talking about it. theologically, Judaism teaches that every individual is created

with Seleum Elohim in the image of God, and that all individuals, indeed all of creation, is deeply

02:45:00.000 --> 02:45:12.000

interconnected so sociologically. Jewish practice requires that we create social structures that bring to life, and that reinforce this theological vision of inherent human value.

02:45:12.000 --> 02:45:19.000

And of interdependence with special attention to the most vulnerable.

02:45:19.000 --> 02:45:26.000

Again and again we are commanded to provide for the stranger the orphan, the widow, the poor.

02:45:26.000 --> 02:45:38.000

There's a particularly powerful teaching from a classical medieval text, Safer Hussein, the book of the pious that teaches. if a community lacks a synagogue and a shelter for the poor it is first

02:45:38.000 --> 02:45:41.000

obligated to build the shelter for the poor.

02:45:41.000 --> 02:45:44.000

So this wisdom emerges out of a particular Jewish experience.

02:45:44.000 --> 02:45:56.000

For centuries up until the modern era. until just a couple 100 years ago, the Jewish people lived in South contained and semi-autonomous communities where the needs of the vulnerable could be mandated as

02:45:56.000 --> 02:46:10.000

a communal priority, and as this symposium demonstrates and is keenly aware of, this is a far cry from our current landscape, which is at once more integrated, and also far more polarized, and i'm

02:46:10.000 --> 02:46:20.000

so appreciative of the cross-disciplinary approach across the symposium and across this panel, even, and the wreckage that religious modalities of healing, they are necessary.

02:46:20.000 --> 02:46:34.000

You just heard how powerful and impactful they can be, and they are only partial solutions that to address the massive damages and inequities wrought by and exacerbated by the pandemic religious solutions, whatever

02:46:34.000 --> 02:46:51.000

their source. they can inspire, they can complement. they can be incredibly effective, but they but they can only work alongside, and as part of a robust and effective so social safety net

and not stand in totally for it.

02:46:51.000 --> 02:47:00.000

Judaism teaches the gorgeous paradox that for one's individuality to be most fully realized, for that image of the divine to really shine out.

02:47:00.000 --> 02:47:16.000

It must happen in community. COVID-19 shined a spotlight on the profound sense of isolation and alienation that is affecting so many people before, and perhaps even more, after, one positive outgrowth.

02:47:16.000 --> 02:47:24.000

I think of the pandemic is that it has re-emphasized the importance of community, and it has rehabilitated the power of networks of communities.

02:47:24.000 --> 02:47:38.000

You heard that Reverend Evans? the talk about the power of his network community, so incredibly, effectively synagogues and churches, denominations and multi faith organizations, mutual aid networks and support groups came together

02:47:38.000 --> 02:47:43.000

to meet urgent and essential needs, both physical and spiritual.

02:47:43.000 --> 02:48:00.000

So in terms of scaling up one path forward, I think, is to tap into these initiatives, like the ones that that have just been described, to strengthen and structure the extent of the structures and the experiences of community ideally I

02:48:00.000 --> 02:48:07.000

think that the the lines that Llewellen laid out of the rest of justice are such incredibly powerful ways.

02:48:07.000 --> 02:48:11.000

These structures of community can mitigate isolation.

02:48:11.000 --> 02:48:19.000

They can deepen connections on the individual level. They can address the question of values that that Dr.

02:48:19.000 --> 02:48:34.000

Flynn raised. They can be low side for the study of storage, Structural inequities and mechanisms for social chains change along the lines that Reverend Everett Evans charged us with Tonight and just

02:48:34.000 --> 02:48:37.000

very soon begins the holiest day of the Jewish year.

02:48:37.000 --> 02:48:48.000

Yom Kippur, the day of the Tongue, and throughout these last few weeks the high holiday season, Jews have been reflecting on our failures and our limitations and our sins.

02:48:48.000 --> 02:48:54.000

This process is called cashbone hanapesh the literally it means the accounting of the soul.

02:48:54.000 --> 02:49:03.000

And we do this exercise so that we can atone and seek forgiveness and resolve to do better.

02:49:03.000 --> 02:49:19.000

I'm not so sure how to measure interventions that might mitigate the pandemic related emotional and spiritual stress, but at a minimum, as all the other speakers are reflected, we must we must reflect deeply on the

02:49:19.000 --> 02:49:22.000

lessons that have emerged from the pandemic.

02:49:22.000 --> 02:49:29.000

The Why were some communities that heightened risk? What added, told, did their vulnerability take what worked well?

02:49:29.000 --> 02:49:50.000

What didn't, what what should be in hand or or made permanent, that hi holiday season it demands accountability, but at core they are based on the belief that repentance and change are possible as reverend evans charged

02:49:50.000 --> 02:50:00.000

us, as Dr. Paul's lip pres described we must take the heart that we can learn, and that we can do better.

02:50:00.000 --> 02:50:14.000

Thank you so much for those moving words I think we've had a great deal of inspirational guidance from all of our speakers on this panel, and so I would love to just have everybody. have i'm sorry I I would

02:50:14.000 --> 02:50:33.000

love. If everyone could have 1 min to wrap up comments about this, and maybe talk about the recovery of the whole community, and how we can take very practical steps to move forward and then we'll i'll do a

02:50:33.000 --> 02:50:43.000

little wrap up for our morning session. So, Reverend Evans, will you start us off right now about for about a minute or so, to wrap up?

02:50:43.000 --> 02:50:58.000

Well my distinguished colleagues in the previous panels, and this panel clearly highlights the

the challenges that we face moving forward, and I think that we do have an rare opportunity here.

02:50:58.000 --> 02:51:17.000

Based on good intentions before. so what I mean is is that there has been any way between 50 to 70 billion dollars a fraudulent payment to people who utilize ppp loans and other programs What i'm asking

02:51:17.000 --> 02:51:37.000

for as a face step by our Federal friends State friends and our local friends is to use that money to begin to explore some concrete solutions strong actually about how to arrive at a just conclusion, and building a a plan for

02:51:37.000 --> 02:51:43.000

our our democracy to help. I think that that is be a great down payment.

02:51:43.000 --> 02:51:48.000

But I think the discussions just start at the community level.

02:51:48.000 --> 02:51:58.000

I think it will be very, very tragic to put these discussions back into the hands of our leaders right now.

02:51:58.000 --> 02:52:12.000

The leaders need to hear from from every segment of our society, and sincerely help to implement those. and they don't have to worry about where the money come from, because the money has already been outigated.

02:52:12.000 --> 02:52:15.000

They also need to be allocation money for long term. Covid.

02:52:15.000 --> 02:52:24.000

This is going to be a serious problem in the future, and of course there have been a commitment to mental health services.

02:52:24.000 --> 02:52:31.000

And the way we implement this mental health legislation that has come down as a result of the gun tragedy.

02:52:31.000 --> 02:52:46.000

And I agree with my friend brian we'll look at a broad-based support of how we do this cross sectors and do it in a way that it would have impact and build structure for times to come so

02:52:46.000 --> 02:52:52.000

that would be my concluding Remarks on the system I don't know.

02:52:52.000 --> 02:53:00.000

Thank you so much. I have to say that you really launched us, and just do a dynamic discussion this morning with this afternoon for those on the east coast.

02:53:00.000 --> 02:53:05.000

So thank you for that, Brian Flynn. Give us the last moment of your thinking.

02:53:05.000 --> 02:53:13.000

Here exactly. I would just recommit to continuing to look at those 5 elements.

02:53:13.000 --> 02:53:19.000

It's not just a good way of approaching crisis is a good way of approaching life.

02:53:19.000 --> 02:53:25.000

I think these these these elements are valuable even when there's not a crisis.

02:53:25.000 --> 02:53:31.000

So I I just can't emphasize enough the importance of that.

02:53:31.000 --> 02:53:45.000

I also think i'm reminded by by the Rabbis comments, that that we really need to to be very aware and attentive to loneliness and isolation of people, and do whatever we can in our

02:53:45.000 --> 02:53:51.000

occupational roles in our personal lives to reduce that.

02:53:51.000 --> 02:53:58.000

And the final thing, I would say is, I will be the first to admit there are times when I have not been optimistic.

02:53:58.000 --> 02:54:04.000

I felt helpless and trying to figure out what to do in the face of all this.

02:54:04.000 --> 02:54:14.000

And we One thing that I have decided that I can do, even if I fail at everything else is, I can be kind in my own life.

02:54:14.000 --> 02:54:25.000

I I can begin to model what I hope people will collectively experience, and maybe if I can't do anything else that may be enough.

02:54:25.000 --> 02:54:31.000

Thank you. Thank you for those very thoughtful comments, Brian Dr. Pennell.

02:54:31.000 --> 02:54:45.000

Some guidance on what we should do going forward. Yeah, I would say that what we should do I love what we what I heard before, and I would say, I I would echo the be kind the micro kindnesses when we have a

02:54:45.000 --> 02:54:52.000

society that is probably a little bit hard of hearing because of their own stresses and their own challenges.

02:54:52.000 --> 02:55:02.000

It's hard to hear. even the micro kindness and so it's if if we can amplify that voice, and it can be heard a little bit more.

02:55:02.000 --> 02:55:17.000

But I would also say that as leaders we have an opportunity to really try and have these kinds of conversations and through partnership, because no one system or person can do anything alone in this whole thing, that we've gone through collectively and

02:55:17.000 --> 02:55:31.000

individually, and so I would say, reaching across the aisle and listen and have dialogue with partnerships, with, for example, representative bodies of this panel really reflect different voices.

02:55:31.000 --> 02:55:38.000

So. partnerships with different voices, I think, is our only way forward to converse and take some lessons learned into action. Thank you.

02:55:38.000 --> 02:55:43.000

So much, Jennifer Llewellyn, and from the restorative justice perspective.

02:55:43.000 --> 02:55:59.000

What do you see ahead? I think, if I leave this with one thing it's that we can't actually afford to rely on and draw down on relationships without structuring, as we heard from evo as we heard from the

02:55:59.000 --> 02:56:10.000

rabbi it without structuring support, of opportunities to build people's opportunities, and kept pass to to pay attention to who we are to want.

02:56:10.000 --> 02:56:14.000

Another how we are to want another. Those are skills, those are muscles.

02:56:14.000 --> 02:56:26.000

We need to exercise, and we need to create every chance we get whether it's in the classrooms in terms of how students encounter one another, and learn about one another, whether it's in the synagogue whether it's in

02:56:26.000 --> 02:56:35.000

the Temple, whether it's in the streets we need leaders to be facilitating opportunities for people to develop those skills.

02:56:35.000 --> 02:56:38.000

For how do we see one another? How do we understand one another?

02:56:38.000 --> 02:56:46.000

And how do we care for one another on the everyday if We're going to be prepared for the exceptional circumstances in which we need to draw down on those skills and capacities?

02:56:46.000 --> 02:56:51.000

They need to be our priority. Thank you so much, Mr.

02:56:51.000 --> 02:56:57.000

Patel from the Interfaith perspective. What do we build on going forward?

02:56:57.000 --> 02:57:02.000

So I think, with something works You do more of it, and you build it into a permanent infrastructure.

02:57:02.000 --> 02:57:04.000

And the faith in the dicing ambassador.

02:57:04.000 --> 02:57:08.000

And if there was something that worked, and I think to myself it this is an entirely doable thing.

02:57:08.000 --> 02:57:17.000

Every public health department can have a Cadra people who diverse people who are trained in how to engage diverse faith communities.

02:57:17.000 --> 02:57:22.000

How faith identities impact help outcomes. You can do this in colleges and universities.

02:57:22.000 --> 02:57:38.000

You can do this in faith communities, And I think to myself, what kind of a difference it would have made if you had that kind of a core already existing, and they worked with hospital administrators to for example, do do vaccination events

02:57:38.000 --> 02:57:53.000

for hospitals that included not just doctors, but nurses and custodial staff, in which diverse faith leaders were present to encourage people from all economic, racial and religious backgrounds to consider the vaccine I think It would have made

02:57:53.000 --> 02:57:59.000

a big difference in a diverse country. I think that this is something we can do, so we should do it.

02:57:59.000 --> 02:58:07.000

Thank you so much. I enjoyed that practical approach. Rabbi Waxman, will you wrap it up for

us this afternoon?

02:58:07.000 --> 02:58:19.000

Of course, one thing I really do appreciate the observation that even as we're looking ahead to like the next crisis, that that the long tail of long covid and one of the things that we're really I know that we're really grappling

02:58:19.000 --> 02:58:35.000

with in my community is the ways that shifting onto online created opened up accessibility for people with, whether it's for mental health or because of physical disabilities, and how to maintain that what the transformations are even from in the in

02:58:35.000 --> 02:58:42.000

the positive ways to make certain that as we move forward we don't leave people behind who who were brought forward.

02:58:42.000 --> 02:58:45.000

And then, I think, points to that point that that I made, that so pretty much.

02:58:45.000 --> 02:58:50.000

Everyone else made the the centrality the importance of relationship.

02:58:50.000 --> 02:58:58.000

I talked to a lot of friends and colleagues to prepare for this panel, and one of my dear friends and colleagues.

02:58:58.000 --> 02:59:08.000

She talked about that when we talked about all the all the different crises that that the Covid 19 is a part of, and she famed it as a crisis of humanity at core.

02:59:08.000 --> 02:59:16.000

That across all of these there's this question of how do we want to be treated.

02:59:16.000 --> 02:59:19.000

How do we want others to treat us? How do we see each other?

02:59:19.000 --> 02:59:22.000

And respond to each other to evoke the language I use.

02:59:22.000 --> 02:59:34.000

But, Salam, I want to thank the panel for this very, very illuminating discussion.

02:59:34.000 --> 02:59:40.000

This today, and our would like to also just touch on a few things.

02:59:40.000 --> 02:59:55.000

We covered this morning, starting with Dr. Brown, I think inspirational presentation on the

notion of abolition recovery, and and Donna Gambrell took it up and talked about empathetic democracy.

02:59:55.000 --> 03:00:13.000

As we move forward. So I I felt they really set the stage for this larger perspective on all the aspects of our community life, and the the way to integrate and coordinate going forward both at the very practical level from agencies and

03:00:13.000 --> 03:00:22.000

organizations to looking at what our speakers on this panel talked about the spiritual and healing notions that we have to embrace as we go forward.

03:00:22.000 --> 03:00:31.000

If we make a recovery that will be enduring and equitable, and that will last on Thursday morning.

03:00:31.000 --> 03:00:35.000

We will pick up this discussion with our panels.

03:00:35.000 --> 03:00:42.000

Sorry No Eastern time 9 Am. Western and Pacific and

03:00:42.000 --> 03:00:56.000

We will start to explore the larger issues of media and recovery, and how we can develop again a sense of the integration that's needed to go forward in a more enduring way.

03:00:56.000 --> 03:01:13.000

So thank you, everyone, for being in our day one of the symposium, and for your very helpful discussions and illuminating guidance.
